R32 VRF multi-system Air-Conditioners

New Climate & Energy Solution

The new Mitsubishi Heavy Industries KXZ VRF series delivers high performance in cooling and heating for all commercial applications. The KXZ series provides the highest level of design flexibility, efficiency as well as operational functions. This brochure highlights the key benefits and new and improved functions of our latest VRF technology.

VRF MULTI SYSTEM

KXZ system is the best air-conditioning solution for "Sophisticated" buildings

KXZ VRF series delivers high cooling/heating performance for all commercial applications.

Heat pump systems

The heat pump systems operate with 2 inter-connecting pipes, and are commonly referred to as a '2-pipe systems'.

These systems provide either a heating or cooling operation to all indoor units at the same time and are suitable for a wide range of applications from an apartment or villa to an entire multi-story building, especially when there are significant open plan areas to be controlled.

The range starts with a 12.1kW cooling capacity, up to 20HP with 56.0kW cooling capacity. Outdoor units can also be "twinned" or "tripled" providing up to 60HP/168.0kW on a single system.(KXZ2)
The range has a total piping length of 1000m (KXZ) and the furthest indoor unit can be connected up to 160m (KXZ) from the outdoor unit.

Environmental

Mitsubishi Heavy Industries, Ltd. (MHI), are unswervingly dedicated to facing the challenges of the future.

MHI are dedicated to supporting global sustainability by offering the most energy efficient air-conditioning systems. Through our in-depth research and development, we are able to incorporate new technologies within our units to maximise their energy efficiency and significantly reduce carbon emissions.

Environmental Impact

MHI recognises the increasing importance of reducing carbon emissions as this is becoming a priority when selecting air and water distribution systems. Furthermore new technologies are constantly being developed to help meet heating and cooling requirements as well as environmental objectives.

The future of our planet rests in the sustained evolution of humankind while caring, with love and responsibility, for all life forms that inhabit it. Therefore MHI will continue to develop new technologies and products and will remain competitive in the market to achieve a sustainable future.

“Micro KXZ series” for small offices, shops applications

Energy efficient and highly reliable industry leading compact units are designed and built by our technology experts.

Micro KXZ

Specific cases of VRF system installation from Mitsubishi Heavy Industries Thermal Systems

Case study : **Education**

We're excited to have provided Crossways Academy in Lewisham with our VRF system, making the school a cooler and more comfortable place for learning.

Maintaining comfortable temperatures in rooms frequented by large groups of students is crucial, and it must be done economically. Factors like simultaneous entries and exits of students, fluctuations in heat load due to IT equipment usage, and the operation of electric blinds to control glare all play significant roles in this endeavor. The VRF KX system from Mitsubishi Heavy Industries Thermal Systems offers an ideal solution for your needs. Designed with a focus on natural ventilation, the building utilizes electronically operated windows. The air-conditioning system is seamlessly integrated with this control system, ensuring it shuts down when windows are opened. Mitsubishi Heavy Industries Thermal Systems KX is specifically suitable for various retrofit applications, making it a perfect fit for your requirements.

Case study : **Hotel and Leisure**

Mitsubishi Heavy Industries (MHI) Thermal Systems' VRF heat recovery systems, part of the KX range, are perfectly suited to meet the rigorous requirements of luxury hotels and "airport-style" bus stations. These systems feature advanced inverter technology, which intelligently adjusts compressor output to precisely match the cooling or heating demands of indoor units. This ensures optimal comfort and energy efficiency in demanding environments. By opting for our adaptable heating and cooling system, you're not just saving energy, but also gaining precise control over room temperatures. Our system empowers you to adjust heating and cooling levels in different areas according to specific needs.

For instance, in sunnier, south-facing rooms where temperatures tend to rise, you can effortlessly increase the heat to maintain comfort. Meanwhile, in cooler, shadier areas of your building, our system efficiently provides energy for heating, ensuring consistent comfort throughout.

With this flexibility, you can optimize energy usage based on varying conditions, enhancing both comfort and energy efficiency in your space.

KXZ3 series

KXZ3

New Design - 6 concepts -

The redesigned model with R32 refrigerant has been engineered by the following 6 concepts.

New line-up

1 FAN structure

Compact design with a 1 FAN structure on the upper part of the unit.

New design 6 Concepts

1 Global Environment

- Reduce CO2 emission by about 70%

2 Wide Design Flexibility

- New exterior design to fit the scenery
- Various type of indoor units available
- Wider limitation of piping installation
- Flexible selection of safety systems

3 Improved Energy Efficiency

- Higher SCOP & SEER
- New R32 scroll compressor
- Heat exchanger with small heat transfer pipe
- Optimized fan and flow path design
- VTCC+ : advanced variable temperature and capacity control

4 Wellness & Comfort

- Advanced continuous heating
- Four steps of capacity control

5 Toughness

- Cooling use in high ambient temperature
- Strengthened resistance against corrosion & frost
- Long life and efficiency for the system

6 Serviceability

- Easy access to replacement parts

Global Environment

Meet our new R32 KXZ3 series of heat pumps, the perfect climate solution for heating and cooling commercial and industrial applications.

By optimizing the KXZ3 series with R32 refrigerant has increased

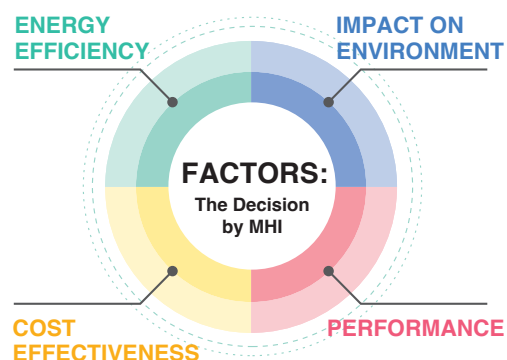

- Energy efficiency
- Cost effectiveness
- Overall performance
- Reduction in environmental impact

R32 - A Low GWP Refrigerant

The Decision by MHI to transition to a new refrigerant is driven by many factors. KXZ3 with the use of R32 refrigerant, lower GWP (675) than R410A (2088)

1. A single component, easy to handle refrigerant
2. Known as a component of the blend R410A (50% R32, 50% R125)
3. Already used in Air-Conditioning systems worldwide
4. Zero Ozone Depletion
5. Superior Energy Efficiency vs. R410A
6. Reduced refrigerant charge vs. R410A
7. Easy to recycle

Wide Design Flexibility

New exterior design to fit the scenery

1. Outdoor units - Product line-up -

Our line-up and limitation of use make it possible to adopt wider range of installation on commercial buildings.

Compact design

One of the smallest in the industry

The **KXZ3 series** has reduced the installation space with the integral structure of the heat exchanger and the mechanical components. The total footprint has become more compact compared to our previous model.

Combination use is also possible

The new product line-up of the **KXZ3 series** can also be installed to offer solutions with a combination of 3 outdoor units.

	Single module		Combination
8 - 12HP		up to 36HP	

Connectability

KXZ3 - Standard Connectable Indoor Units

Increased number of connectable units and max capacity connection.

Standard KXZ3	HP	8	10	12	16	18	20	22	24	26	28	30	32	34	36
	Numbers	22	28	33	45	50	56	61	67	73	80	80	80	80	80
	IU Capacity connection	50 - 150% (*1)													

(*1) When connecting the indoor unit type FDK, FDFL, FDFU or FDFW series, limit the connectable capacity not higher than 130%.

Various type of indoor units available

Indoor units only for

Coming soon

Wider limitation of piping installation

3. Flexible pipe installation

Total length :

1,000m

Furthest indoor unit:

Actual length: **160m**

The piping length of our KXZ series have been extended with a maximum height difference between indoor units of up to 30m enabling installation of indoor units on an extra three floors. Also, the furthest unit can be installed up to 160m from outdoor unit.

(*2) : The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m.

Flexible selection of safety systems

4. Safety system R32 refrigerant

R32 refrigerant is categorized as mildly flammable (A2L) by International Standard ISO817. Safety measures specified in safety standard IEC60335-2-40 Ed.6.0. must be observed when installing or using R32 refrigerant equipment. The necessity of safety measures and the type and number of required safety equipment depend on the conditions of each room in the building.

1. Refrigerant leak detector	2. Safety alarm	3. Shut-off valve	4. Ventilator <small>MHI option has not been prepared.</small>
------------------------------	-----------------	-------------------	---

The necessity of safety measures and the type and number of required safety equipment depend on the conditions of each room in the building. Safety equipment units are grouped into the following categories.

Refrigerant leak detector
(Safety alarm)

RLD-KIT-E

Remote Controller
(Safety alarm)

RC-EX3D

Shut-off valve

SV-KIT-S1N-E
SV-KIT-L1N-E

Example of the safety system

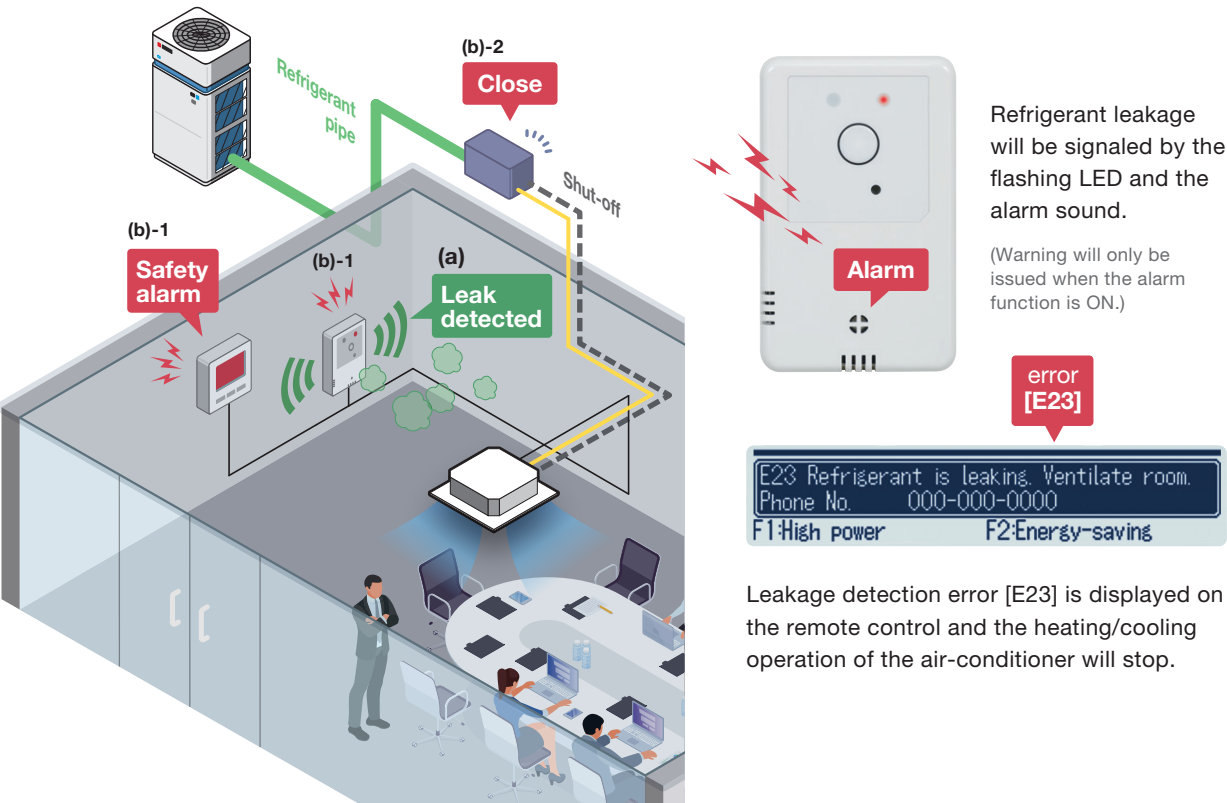

1. Refrigerant leak detected

2. Safety alarm is sounded, and flow of refrigerant is blocked.

(a) : Refrigerant leak detector detects refrigerant leakage in the room.

(b)-1 : Safety alarm sounds and light alerts to signal refrigerant leakage.

(b)-2 : Shut-off valve in the refrigerant pipe closes and blocks the flow of refrigerant.

Improved Energy Efficiency

Higher SCOP & SEER

Increased seasonal efficiencies

Our **KXZ3 series** provide high performance and excellent energy savings across all ranges. This is achieved by the optimized heat exchangers with the increased capacities and the advanced energy efficient compressor.

From the models beyond 450 the KXZ3 series are measured with combinations

Features

Improved seasonal efficiency is achieved by

- 1 New R32 scroll compressor with the improved scroll mechanism and motor.
- 2 Heat exchanger with small heat transfer pipe (Φ7)
- 3 Optimized fan and flow path design
- 4 Advanced VTCC⁺ control

New R32 scroll compressor with the improved scroll mechanism and motor

1 New scroll compressor

With the adaptation of new components and its optimization, the KXZ3 series is now available in R32 refrigerant with a higher efficiency and a wide operation range. The new compressor uses the latest compressor technology and has proven to be extremely reliable.

New Technology

1. New liquid injection structure to cool down the refrigerant

Leading to
the wide operation range

2. Redesign of the spiral structure of the scroll

Leading to
higher efficiency

3. Larger motor with an optimized winding structure of the coil

Leading to
the wide operation range
and improved efficiency

4. New oil circuit that returns the oil to the bottom of the compressor, decreasing the amount of discharge oil at high rotation range.

Leading to
higher efficiency

5. Optimized layout of multi ports / discharge ports in the scroll

Leading to
higher efficiency

6. Wear resistant coating to some of the parts

Leading to
the wide operation range

Expansion of minimum | Rotation speed of the compressor

Achieving precise performance control

Improved energy savings and comfort at set temperature

Heat exchanger with small heat transfer pipe (Φ7.0)

2 Improved heat exchanger

Adopting a slimmer 7.0mm copper pipe. By increasing the number of the copper pipe and fin, the performance level has improved while keeping the heat exchanger size small.

The adoption of the new slim heat exchanger has resulted in a more compact size and reduced refrigerant volume, while maintaining higher overall performance and efficiency compared to the previous model.

Heat exchanger: (10HP)	-30% in volume	-12% in surface area
---------------------------	--------------------------	--------------------------------

Slimmer heat exchanger and a dense copper piping

Optimized fan and flow path design

3 Optimized air flow structure

Pressure loss in flow path is minimized with the newly designed impeller and optimized path, dedicating better energy efficiency. Regulated air flow by optimized flow path leads to more efficient heat exchange.

Air flow velocity
Small Large

- 1. Optimized diffuser
- 2. Newly designed impeller
- 3. Heat exchanger

Extended external static pressure

Max: **90 Pa**

Flexibility to meet installation location needs.

VTCC⁺ : advanced variable temperature and capacity control

4 KX VRF redesigned with VTCC⁺

New Variable Temperature and Capacity Control

VTCC⁺

New VRF control VTCC⁺ adjusts the target pressure of the refrigerant automatically according to the requirement load of the indoor rooms in partial load conditions.

These smooth adjustments ensure an optimal capacity usage of the indoor units as well as maximised energy savings. Ultimately this also increases comfort for the user.

- Most balanced mode between capacity control and energy saving
- Target pressure is automatically adjusted according to heating/cooling requirement, which achieves energy saving
- Advanced capacity control achieves smooth temperature control close to set temperature
- Suitable for heating/cooling demand varies among the room in the building

VTCC⁺ concept image

* Saving mode(U-High) compared to standard mode in the following conditions
Cooling : Outside temperature 20°CDB, Partial load factor 21%, Set temperature 27°C
Heating : Outside temperature 12°CDB/11°CWB, Partial load factor 15%, Set temperature 20°C

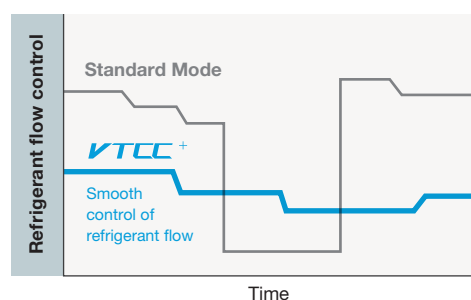

New Saving mode

- Suitable for the building with strict energy target
- Target pressure would be fixed based on the selected eco level (Low / Medium / High / U-high)

Standard mode

- Capacity is maximised
- Suitable for high heating/cooling demand in the building
- Target pressure is adjusted steady to maximize the capacity

Better partial load performance

* All the graph above shows the conditions in cooling

Wellness & Comfort

Advanced continuous heating

Continuous heating with two defrost modes

Two defrost modes are prepared, and the defrost is automatically switched according to the amount of frost formation. Hot gas defrost mode enables non-stop heating during defrost operation with of hot gas bypass.

Enhanced heating operation functions

The comparison between the air outlet temperature of normal defrost and hot gas defrost

- Reduction in the time period of temperature drop caused by defrost
- Mitigation in temperature drop caused by defrost

Four steps of capacity control

Capacity control with 80%, 60%, 40%, 0% (off)

The **peak cut function** can easily be set on the controller. This function makes the control of the capacity easier and allow a better energy management over the long term. Four steps of capacity control are available with 80%, 60%, 40%, 0% (off). Schedule can be set up to 4 operations/day.

Concept 5

Toughness

Cooling use in high ambient temperature

Wide range of operation

Our new advanced technology has expanded the heating and cooling operation range.

KXZ3 series permits an extensible system design with a heating range operation down to -25°C and a cooling range operation up to 52°C .

* With limitation to piping length and height difference between indoor and outdoor units.

Strengthened resistance against corrosion & frost

Blue fin

Due to application of blue coated fins on the heat exchanger of the new outdoor unit, corrosion resistance has been improved compared to previous models. Resistance against frost has been strengthened by adopting the energy efficient heat-exchanger.

Long life and efficiency for the system

Oil level control capability

Our proprietary technology adjusts the oil level when combining two or three outdoor units, achieving level operation rate, keeping performance of the units and ensuring long life of the system.

Serviceability

Easy access to replacement parts

Easy access to the control box

The **control box** is in the upper part of the unit and can now be easily accessed by taking off the upper front panel.

Features

- The total amount of data that can be checked from the remote controller has increased
- Can save the data of the operating conditions 30–180 minutes before malfunction after the power is off
(To save data for more than 30 minutes settings must be changed)
- Can now record the running hours of the fan motor

Automatically produced test-run report

Mitsubishi Heavy Industries Sales Company

Operation data storage during servicing

Operation data storage when a fault occurs

Check Operation

Closing of Service valve, crossing connection of refrigerant piping and electrical wiring, proper operation of EEV (Electrical Expansion Valve) can be checked automatically in cooling operation. It takes 15–30 minutes and avoids frequent failure by preventing careless mistakes during installation.

Monitoring Function

All series include features to assist with servicing and troubleshooting. Various data can be monitored through 3 or 6-digit display on the outdoor unit PCB.

Detailed fault diagnosis and operation history memory via 7-segment display.

SL Checker 2

Remote Control can be operated function from setting Superlink checker.

Back-up Operation

In the event that one unit has a failure, the system will keep operating with the other units.

Energy efficient and environmentally conscious

Several radical design changes and engineering developments have brought about a vast improvement in energy efficiency and environmental protection.

SEER and SCOP is defined in European regulations listed below.

No.2016/2281: requirement for air-heating products, cooling products, high temperature process chillers and fan coil units. Seasonal efficiency is the new way of rating the true efficiency of heating and cooling products over an entire year. Set by the EU's new regulation implementing Eco-Design Directive for Energy related Product (ErP) which specifies the minimum efficiency of air-conditioners manufacturers must integrate into their products. The new Seasonal Efficiency rating system that must be used for heating and cooling by all manufacturers are;

SEER - Seasonal Efficiency Ratio (value in cooling)

This ratio represents the annual cooling performance divided by the annual consumption of electricity for cooling.

SCOP - Seasonal Coefficient of Performance (value in heating)

This ratio is calculated as the divided reference annual heating performance by the annual consumption of electricity for heating.

RoHS - Restriction of Hazardous substances

In order to avoid the release of hazardous substances into the environment, all models have utilized lead-free solder application. It has been considered to be difficult to use lead-free solder for practical applications because it requires higher solder temperatures at assembly, which can jeopardize reliability. However our PbF soldering method can produce a higher quality lead-free printed circuit board.

8-12HP (22.4kW – 33.5kW)

Technical focus

- Available in the R32 refrigerant
- New exterior design containing cutting edge technology
- High SEER with advanced technology
- VTCC⁺ : advanced variable temperature and capacity control
- Compact design with a small total footprint
- Advanced continuous heating

KXZ2 series

KXZ2

Flexible Design

The KXZ2 series has a layered design and a refined new form. The flexibility in design and ease of installation are further enhanced to provide optimum response to medium and large building air-conditioning systems.

- 1 Highly efficient Heat exchanger
- 2 Optimised duct shape
- 3 Inverter control
- 4 DC Fan Motor
- 5 Rounded design
- 6 Compressor

The compressor has improved the units efficiency by innovating the thrust plate. Resulting a reduced friction loss, and increased reliability.

Wide range operation

Cooling range operation up to **52°C**

* With limitation to piping length and height difference between indoor and outdoor units.

Extended external static pressure

Max:
50 Pa to 85 Pa

Flexibility to meet installation location needs.

Indoor unit capacity connection

Increased number of connectable units and max capacity connection
(compared to KXZE1)

HP	10	12	14	16	17	18	20	22	24	26	28	30	32	34

HP	36	38	40	42	44	46	48	50	52	54	56	58	60
Numbers	80												
IU Capacity connection	50 - 130% ^{(*)1}												

(*1) When connecting the indoor unit type FDK, FDFL, FDFU or FDFW series, limit the connectable capacity not higher than 130%.

CHCC

Continuous Heating Capacity Control

Our CHCC defrosting control has been added to our KXZ2 system and allows to achieve greater capacities than that of our previous model in low ambient temperature conditions. CHCC controls the target pressure automatically before the capacity drops, which increases the period of heating operation and reduces the systems defrosting time.

Energy Savings *
34%

Variable Temperature and Capacity Control

VTCC adjusts the target pressure of the refrigerant cycle in the outdoor unit automatically according to the demand of the indoor units in partial load conditions. These smooth adjustments ensure optimal usage of the indoor units as well as maximised energy savings. Ultimately this also increases comfort for the user.

* 34% energy savings are based on comparison with a KXZ standard model with VTCC vs. a KXZ standard model both under partial local condition.

Long Pipe length

Total length :
1,000m

Furthest indoor unit:
Actual length: **160m**
Equivalent length: **185m**

The maximum height difference between indoor units is a maximum of 30m, and the maximum height difference between the outdoor unit and indoor unit is 90m.

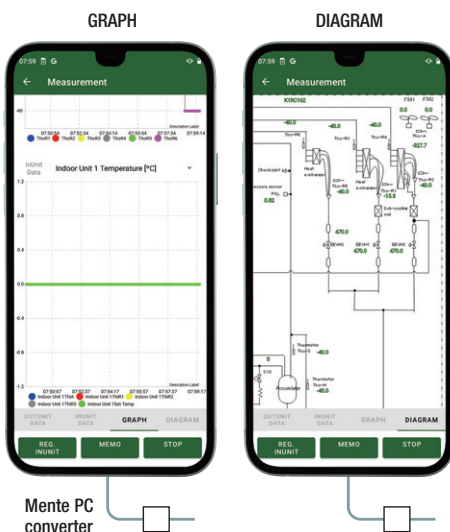

For with few limitations, contributes to system design flexibility.

*1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)

Field service with smart device

android only

Monitoring and service task could now be done with a smartphone or a tablet by connecting to the Mente PC converter.

DATA SHARE

The data collected via the smart device could also be sent and viewed with our service software Mente PC.

To your PC monitoring and service tasks made simple with our service software ("Mente PC").

10, 12HP (28.0kW • 33.5kW)

Technical focus

- The KXZ2 series has a layered design and a refined new form
- High efficiency with EER up to 3.86
- VTCC : advanced variable temperature and capacity control
- Total piping length up to 1000m and a maximum height difference between indoor unit is maximum of 30m.
- Wide range of operation.

Uniform footprint of models allows continuous side-by-side installation

Higher
Energy
Savings

KXZ2

Up to 24HP [67.0kW]
with 1 single outdoor unit

Flexibility and Performance

The heat recovery systems operate with 3 inter-connecting pipes, commonly referred to as a '3-pipe system'.

The systems provide both heating and cooling operations simultaneously to individual indoor units according to room conditions or user requirements.

The systems incorporate highly sophisticated controls transferring heat load energy from the entire building to provide an efficient, comfortable heating and cooling environment.

The range starts from a cooling capacity of 8 HP (22.4 kW) and expands up to 24 HP (67.0kW) using a single outdoor unit. Outdoor units can also be used as a modular system (twin or triple) providing up to 60 HP (168.0 kW) of cooling capacity.

Example of simultaneous heating and cooling

Heat recovery systems

The system interconnecting pipework has a unique arrangement, with two of the interconnecting pipes routed through a PFD Distribution Controller, and the third pipe connected directly to each indoor unit from the main pipe run. This reduces installation time, and the number of brazed connections on site. The PFD Distribution Controllers are available for single connection, or as a combined PFD 4-way connection, with each connected unit having independent cooling or heating operation.

During defrosting or during automatic protection of a compressor, which is activated every several hours in heating operation, heating operation temporarily stops and restarts after some period. The series has the same automatic protection of compressor in cooling operation also. During this protection period air flow only comes on and cooling operation restarts after some period. These models are not suitable for year round cooling applications -such as server rooms- especially in areas where the outdoor air temperature goes below 5°C.

Heat recovery features

High efficiency in simultaneous **heating** and **cooling** mode

Highly efficient operation mode is automatically determined inside the refrigerant system during simultaneous cooling and heating operation. Heat recovery efficiency is maximized by this control and Max COP 9.0 (*) is achieved during operation with simultaneous cooling and heating.

* Conditions for simultaneous cooling and heating (Our estimation in 8HP operation and the following conditions: Temperature outside the room DB16°C/WB12°C, temperature in the cooled room DB27°C/19°C, and temperature in the heated room DB20°C/WB14.5°C)

Energy efficiency in heat recovery mode

Technology

High Efficiency

The graphs below highlight the improved efficiencies of the KXZR and Hi-COP models compared to the previous models.

Comparison of EER in cooling mode

Comparison of COP in heating mode

Continuous Heating Capacity Control (CHCC) -

Our CHCC defrosting control achieves more capacity than that of previous model in low ambient temperature condition. Target pressure is controlled automatically before capacity drops, which makes longer period of heating operation and shorter defrosting time.

Improved cooling capacity in low ambient temperature

Small split heat exchanger and pressure control make it possible for the outdoor unit to work in cooling operation even at low ambient temperature condition, which achieves more capacity in such low ambient condition as -5°C, compared to previous model.

In previous model, when high demand for heating and low cooling demand are required at the same time in low ambient temperature condition, pressure control is adjusted to keep more heating capacity than the cooling capacity. Adopted heat exchanger and pressure control in KXZR series, has improved its capacity for both heating and cooling capacity at the same time. (*)

(*) Refrigerant system will prioritize required heating mode more than low cooling demand, in case most of the indoor units are operated in heating mode.

Blown air temperature in the cooled room

Design Flexibility

Indoor unit capacity connection

KXZR	HP	8	10	12	14	16	17	18	20	22	24	26	28	30	32	34	36	38	40	42	44	46	48	50	52	54	56	58	60

	IU Capacity connection	50-200%					50-160%						50-130%																

KXZR	HP	16	18	20	22	24	26	28	30	32	34	36
	Numbers	60	53	59	65	71	78	80				
	IU Capacity connection	50-200%	50-160%								50-130%	

Connectable indoor units

Up to 80 indoor units can be connected to the largest capacity outdoor unit, with a range of 15 types of exposed or concealed indoor unit, in several capacities, a choice of 82 indoor units is available.

- In case that capacity connection is more than 130%, additional charge of refrigerant is required on site.
- In case of 8-34HP of the systems, if one or more indoor units of FDK, FDFL, FDFU and/or FDFW series are connected to the system, the total connecting capacity of indoor units should not exceed 130%.

Wide Range of Operation

KXZR series permits an extensible system design with a heating range operation under a low temperature condition down to -20°C and a cooling range operation up to 46°C

Long Pipe Length

Total length :
1,000m

Furthest indoor unit:

Actual length: **160m**

Equivalent length: **185m**

The maximum height difference between indoor units is a maximum of 30m, and the maximum height difference between the outdoor unit and indoor unit is 90m.

For with few limitations, contributes to system design flexibility.

*1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)

Improvement of the PFD controller noise level

Sound insulation box design specification, reducing the level of noises from the PFD controller generated due to the flow of refrigerant or other causes.

Sound insulation design

8-12HP (22.4kW – 33.5kW)

VTCC

Technical focus

- The KXZ2 series has a layered design and a refined new form
- High efficiency with EER up to 3.89
- VTCC : advanced variable temperature and capacity control
- Continuous heating capacity control
- Total piping length up to 1000m and a maximum pipe run of 160m

- for simultaneous *heating* and *cooling*

Uniform footprint of models allows continuous side-by-side installation

- The data are measured under the following conditions (ISO-T1, H1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
- SEER/SCOP are based on EN14825:2016 and Commission regulation (EU) No.2016/2281. Temperature conditions for calculating SCOP are based on "Average climate".
- Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
- 'tonne(s) of CO₂ equivalent' means a quantity of greenhouse gases- expressed as the product of the weight of the greenhouse gases in metric tonnes and of their global warming potential.
- Refrigerant contained in the products is a fluorinated greenhouse gas listed in Regulation (EU) No 517/2014.
- Refrigerant piping size applicable to European installations are shown in parentheses.

26-40HP (73.5kW – 112.0kW)

Technical focus

- The KXZ2 series has a layered design and a refined new form
- High efficiency with EER up to 3.47
- VTCC : advanced variable temperature and capacity control
- Continuous heating capacity control
- Total piping length up to 1000m and a maximum pipe run of 160m

- for simultaneous *heating* and *cooling*

PFD refrigerant flow branch control

Branch control

PFD1124-E	less than 11.2kW
PFD1804-E	less than 18.0kW
PFD2804-E	28.0kW or less
PFD1124X4-E	less than 37.1kW(less than 11.2kWx4 branches)

Total downstream indoor unit capacity

PFD1124-E	less than 11.2kW
PFD1804-E	less than 18.0kW
PFD2804-E	28.0kW or less
PFD1124X4-E	less than 37.1kW(less than 11.2kWx4 branches)

Relay kit
(Relay kit comes attached to the branch control)

4-Way PFD box

Design flexibility

A total of 37.1 kW group of indoor units can be connected to a PFD box single branch. All connected units will operate in the same mode only (cooling or heating).

The recent 4-way PFD control PFD1124X4-E can connect to up to four indoor units with individual control – allowing for simultaneous cooling or heating.

- The remote control setting (as individual indoor unit on-off, temperature setting other than cooling/heating mode control) is possible with one remote control connected to each indoor unit, while at the same time, Center Control (SC-SL1N/SL2NA/SL4-AE3) can be used together with the individual remote control.
- It is necessary to set the central control to use this function. Please refer to the Installation Manual for details.
- In case of mode changeover from cooling to heating and from heating to cooling, by the use of only the indoor units and PFD box combination, the mode changeover noise is reduced. All this made possible without turning off the compressor and at the same time without the reduction of capacity. The risk of refrigerant leakage is reduced by changing piping connection at the PFD box to brazing method.
- The use of optional PFD box extension cable that has a connector at ends, makes it possible to further separate the indoor unit and PFD box. This will enable the PFD box to be located away from the indoor unit and help reduce the influence of sound caused by PFD box and refrigerant flow.

Branch control	Total downstream capacity	Connectable indoor units
PFD1124-E	less than 112	1-5
PFD1804-E	112 or more but less than 180	1-8
PFD2804-E	180 or more but less than 280	1-10
PFD1124X4-E	less than 371(less than 112 per branch)	Up to 16

*Refer to Data Book for details

Easy installation

PFD control box design allows to directly connect the liquid pipe from indoor unit to outdoor unit by bypassing the PFD box. As a result, the piping connections per indoor unit are reduced by a third, thus reducing installation time and cost.

extension cable 15m

PFD4-15WR-E (option)

The PFD is connected to the indoor unit by 3 core signal wire via a relay kit (supplied) to be located within 2m of each other. The indoor unit however can be up to 40m away. Power to the PFD can be connected from the indoor unit or other supply.

Micro KXZ series

Micro KXZ

Space saving for small offices, shops applications

Micro 4–6HP

- 1 Heat Exchanger
- 2 Inverter Control
Vector Inverter Control system
- 3 DC Fan Motor
Compact & High efficiency
- 4 Twin Rotary Compressor
- 5 System Control

1 Compact high efficient Heat Exchanger

- Optimizing relationship of the air flow velocity & fin pattern
- Improvement of air distribution
Maximizing efficiency of heat exchanger

5 Optimum Refrigerant System Control

- Optimum heat exchanger refrigerant distribution
- Advanced refrigerant liquid return protection control system
- High speed system control by Superlink system

Micro 8–12HP

Wide range operation

*With limitation to height difference between indoor and outdoor units and installation space.

Long Pipe length

Micro 4–6HP

Micro 8–12HP

Easy Transportation & Installation

Due to realization of significant reduction in size and footprint which is one of the smallest in the industry, transportation in an elevator made for six persons (Width:1400mm, Depth:850, Open area:800mm) is possible, eliminating cost of a crane and reducing labor.

4-6HP (12.1kW – 15.5kW)

Technical focus

- Compact & flexible design
- High efficiency with EER up to 4.08
- Easy maintenance & Quick installation
- Available in 1-phase (KXZEN1-W) and 3-Phase (KXZES1-W)
- Total piping length up to 100m and a maximum pipe run of 70m

1. The data are measured under the following conditions (ISO-T1, H1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.

2. SEER/SCOP are based on EN14825:2016 and Commission regulation (EU) No.2016/2281. Temperature conditions for calculating SCOP are based on "Average climate".

3. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

4. 'tonne(s) of CO₂ equivalent' means a quantity of greenhouse gases- expressed as the product of the weight of the greenhouse gases in metric tonnes and of their global warming potential.

5. Refrigerant contained in the products is a fluorinated greenhouse gas listed in Regulation (EU) No 517/2014.

6. Refrigerant piping size applicable to European installations are shown in parentheses.

*1 Seasonal efficiency of Eurovent certification condition SEER/SCOP certified value according to the max air flow limit of 275m³/h/kW stated in the Eurovent certification rules.

*2 Seasonal efficiency of Lot6/21 condition.

4-6HP (12.1kW – 15.5kW)

Technical focus

- Compact & flexible design
- High efficiency with EER up to 3.82
- Easy maintenance & Quick installation
- Available in 1-phase (KXZEN1) and 3-Phase (KXZES1)
- Total piping length up to 100m and a maximum pipe run of 70m

Refrigerant piping

Installation of Interconnecting Pipework

KXZ equipment is manufactured to meet the highest standards of quality and reliability. It is imperative that the method of installation and the materials used are also to the high standards, to ensure trouble free operation and long term reliability.

The interconnecting pipework must be installed by a competent and trained engineer. Refrigeration quality copper tube must be used, soft copper coils or half-hard straight lengths. The refrigeration quality tube must be soft drawn seamless high grade copper pipe. The copper tube must be selected taking into account the higher operating pressures of R32 • R410A refrigerant, and that high pressures will occur throughout the system because of the reverse cycle operation. All pipework material used should comply with EN12735 European standard.

The supplied branch pipe kits, must be used to make connections to indoor units, and the supplied manifold kits must be used to make connections between outdoor units (where applicable); it is not permitted to use standard fittings such as elbows, tees etc. The branch pipes shall be installed in accordance with the manufacturer's instructions, allowing unrestricted flow of refrigerant, and in accordance with European standard EN378.

All brazed joints shall be made with dry nitrogen purge to ensure the prevention of oxidation of the internal surface of the copper pipes.

The ingress of moisture, dirt and any other contaminants to the interior of the copper pipes, and air-conditioning units, must be prevented during the installation procedure.

After the installation of pipework, prior to the connection of the outdoor units, and sealing of insulation joints, the pipework must be pressure tested for leakage, using dry nitrogen.

Additional Refrigerant

Only R32 • R410A refrigerant shall be used, it must be charged by weight only, using electronic scales. The amount of additional refrigerant must be accurately calculated from the manufacturer's data, based on the length and diameter of each section of the liquid refrigerant pipework of the system.

The products contains fluorinated greenhouse gases covered by Kyoto protocol.

Refrigerant piping size selection

New Generation FDT

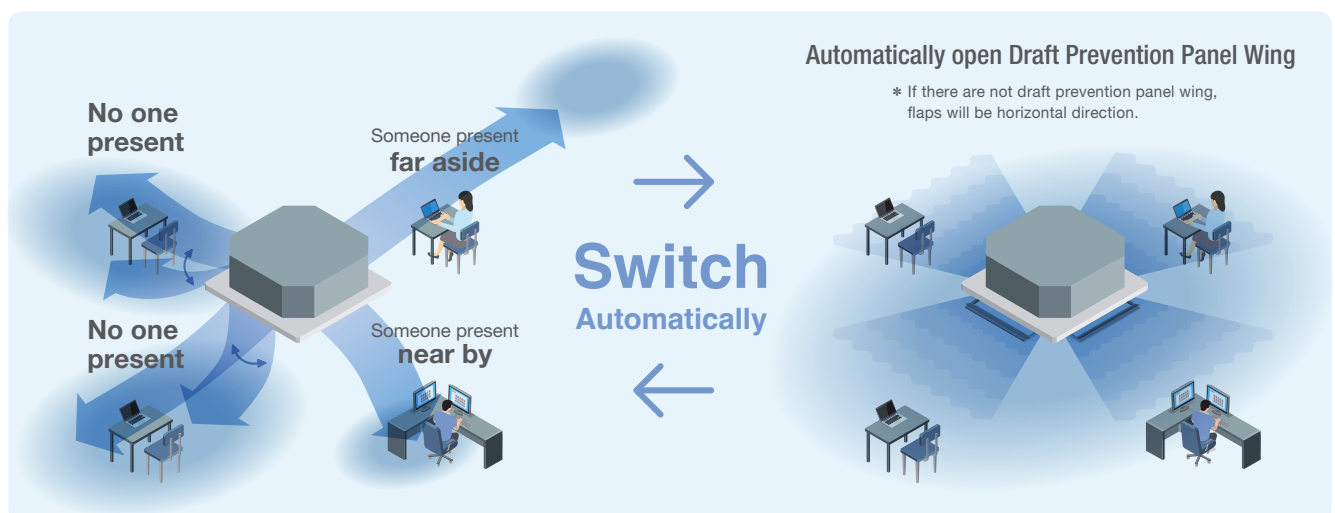

New *Automatic anti-draft control*

A corner-mounted motion sensors detects human presence and activity in a room, enhancing comfort.

1. Air flow based on human position

2. Anti-draft control for all directions

New

Thermal sensing soothing comfort

A Sensor to optimize the air flow

Direct flow control

The louvers are controlled to blow towards human position.

Draft less control

Draft prevention panel is activated based on human position.

New Improved performance

Power consumption decreased by:

1. Adopting new designed impeller and flow path

improves the aerodynamic performance of the unit.

2. $\Phi 5.0$ heat exchanger tube is adopted to improve the performance

Slimmer heat exchanger and a dense copper piping.

Draft Prevention Panel (Option)

Keep maximum comfort with minimal draft : FDT & FDTC control flaps with more flexibility.

Each of the 4 flaps can be controlled individually at each operation mode. They change air flow direction and prevent drafts occurring. This function also provides flexible control for air flow direction. User can position Draft Prevention Panel panels by using only the remote controller (RC-EX3D, Wireless kit).

- It can also prevent user from being directly blown by hot drafts in heating mode.

Motion sensor (Option)

Three Steps Control

1 Power Control

Motion sensor (option) detects human activity. Energy saving control is achieved by shifting set temperature according to detected amount of activity.

2 Stand by

Unit will go on stand-by mode when no activity is detected. When the motion sensor detects activity again, the unit will automatically re-start operation.

3 Auto Off

Unit will go off automatically when no activity is detected for 12 hours.

Operation mode and Control of Motion sensor

Operation mode and Control of Motion sensor		eco operation	comfort operation			
		Operation mode				
	Human activity	Auto	Cool	Heat	Dry	Fan
Power Control *1	Low 	Cooling +3℃	+3℃	+3℃	—	—
		Heating +3℃				
	High 	Cooling -3℃	-3℃	-3℃	—	—
		Heating -3℃				
	None	Cooling -3℃	-3℃	-3℃	—	—
		Heating -3℃				
Auto Off *2		●	●	●	●	●

*1 Set temperature is revised maximum ±3°C at Cooling/Heating mode by detecting heat volume movement.

*2 Absence for 1 hour ⇒ Operation stops ("Stand-by") 12 hours absence ⇒ Operation stops completely

Wireless Control System Now available in our FDT series

Control your air-conditioner from anywhere, anytime.

If you turn on the air-conditioner when you're on the go, you'll be comfortable when you get to the office. Even if you forget to turn it off, you can turn it off when you are out and about.

WF-PAC-E

You can control the air-conditioner at home or on the go by installing App (Smart M-Air) on your smartphone or tablet.

Search for "Smart M-Air" from the GooglePlay™ store for Android™ and AppStore for iPhone.

Application compatible model:

Please check the app stores for the latest supported OS version information.

App Store and iPhone are registered trademarks of Apple Inc. Google Play and the Google Play logo are trademarks of Google LLC.

Functions

- 1 Turn ON/OFF
- 2 Change operation mode (Auto, Cool, Heat, Fan, Dry)
- 3 Control temperature
- 4 Set Timers
- 5 Favourite setting

Notification Function

- 1 Shut-off reminder alert
- 2 Accidentally left running
It will be sent to your smart device if the air-conditioner is accidentally left running
- 3 Hi temp / low temp alert
- 4 Watching function

Weekly Timer

Timers can be set for different days of the week. They can also be set from the calendar.

System configuration

Smartphone / Tablet

Internet

Router

WF-PAC-E

* For the units that does not include wireless LAN the function could be used by adopting an option (WF-PAC-E)

*SC-BIKN2-E cannot be used simultaneously for system configuration.

Indoor unit

Serviceability & workability

Easy and quick installation and maintenance

Indoor unit is easily positioned and installed

Quick positioning!

1 Adjustable easier positioning of unit by new slits

FDT

New shape of slit is suitable to install the unit with more flexibility, compatible with many kinds of suspending bolt pitch on site. Any rectangular or squared pitch of suspending bolts are available with this slit.

2 New slit in panel allows easier installation on site

FDT

FDTC

Flexible positioning is available, which helps adjusting the direction of panel accordingly to lines or pattern on the ceiling.

Quick installation and maintenance

1 Easy access to component part for easy maintenance

FDT

1. The control box and bell mouth can be removed together.

2. Easy access to impeller and fan motor.

2 New shape of path of wiring

FDT

New shape of path gives easy wiring work for installation.

3 No need to remove screws to open the controller cover

FDT

It is possible to loose and slide open the cover without removing the screws. This prevents the cover from falling and causing damage on site.

4 More safe installation by stopper of washer

FDT

FDTC

When unit is installed with hook between washers, this stopper helps to install the unit safely, without adjusting washer.

Easy installation and maintenance

For smooth and easy working

1 Easy and flexible hook to remove the filter

FDT FDTc

Hook of soft material helps to remove the filter without dust spreading.

2 Securely fix the corner lid by strap

FDT

The direction of the strap hook part has been changed from longitudinal to lateral. Furthermore, a barb has been added to the hook pin to prevent the strap from coming off.

3 Drain-up-lift increases up to 850 mm

FDT FDTc

The drain can be lifted up to 850 mm from the ceiling surface.

4 New port to check drain water flow

FDT

A water supply port has been provided in the piping lid for easier testing of the drain water flow.
(The port is usually sealed with a rubber cap.)

5 Re-use of packages during construction work

FDT FDTc

Package material (carton) helps to protect the unit from unexpected welding spatter or dust on the new unit.

6 More flexible outlet for ducting

FDT FDTc

Both $\Phi 125$ and $\Phi 200$ (oval shaped) are available.

Remote Control

Simple use with advanced settings REMOTE CONTROL

RC-EX3D

Intuitive touch controller with Liquid Crystal Display

Function Switch

The function switch allows you to select and set two functions of your choice among the seven available functions shown.

These functions can be used by simply pressing the button after they are set, allowing you to use your preferable functions immediately.

1. Draft prevention ON/OFF

Anti draft can be turned ON/OFF with a single tap of the button.

2. High Power Mode

High Power Mode achieve excessive cooling / heating capacity in 15 minutes to quickly adjust the room temperature to a comfortable level.

3. Energy Saving Mode

Temperature is set to be optimized to save energy without losing comfort.

4. Quiet Mode

Outdoor unit starts to operate quietly by activating this mode. The time of this mode can be set in conjunction with Indoor Silent Timer.

5. Home Leave Mode

Home leave mode maintains the room temperature at a moderate level.

6. Favourite Mode

Operation mode, set temperature, fan speed and air flow direction will automatically be adjusted to the programmed favourite setting.

7. Filter Sign

Announces the due time for cleaning the air filter.

Function switch (F1)

Function switch (F2)

Favourite Mode

Operation mode, set temperature, fan speed and air flow direction are memorized and allocated to two buttons that can be operated by one touch.

Adjustable Brightness of the Operation Lamp

The brightness of the operation lamp behind Run/Stop switch can be adjusted by 10 stages.

Draft Prevention Setting

(only for FDT•FDTC series)

User can enable/disable the motion of Draft prevention panel for each blow outlet for each operation mode. This function can be set while operating.

Easy Adjustment of the Air Flow

User can visually confirm and set the direction of flaps using the visual display on the remote controller.

Motion Sensor Control

Presence of humans and activity are detected by a motion sensor to perform various controls.

1 Select Enable / Disable Motion sensor control

Enable/Disable

Select **Enable** / **Disable** for the motion sensor of the indoor unit connected to the R/C.

2 Select Enable / Disable per control

- Power control
- Auto-off

Enable/Disable

Backup Control

Control restricted to two indoor units (two groups)

Fault backup control

Keep back up all the time!

If one of the two indoor units malfunctions and stops its operation, the other starts backup operation so that users' comfort will not be compromised.

Capacity backup control

Maintains users' comfort!

When the control system detects either of its two units operating with overload, the other unit cover the capacity.

Rotational operation control

Energy saving and longer life!

By operating two indoor units alternately, their chronological changes are equalized. (The alternate operation cycle can be specified in a range from 1 to 999 hours in increments of 1 hours.)

New! Design Remote Control

RC-ES1

- Simple and sophisticated design
- Compact size (86×86mm)
- Remote control with Bluetooth® wireless technology

You can control the air-conditioner
by installing App on your smart phone

Search for "Smart M-Air PRO" from the GooglePlay™ store for Android™ and App Store for iPhone.

Please check the app stores for the latest supported OS version information.

App Store and iPhone are registered trademarks of Apple Inc.
Google Play and the Google Play logo are trademarks of Google LLC.

Wireless connection

- Remote control with Bluetooth® wireless technology
- Easy set-up of indoor units
- Notifications of abnormal conditions or operational data from the remote control will be sent to your smartphone.

Information screen

By looking at the information screen, you can check the current operating conditions at a glance.

Central management by smart phone

You can select and change the settings of multiple rooms with only one action on your smartphone.*

*The function would be available when the smartphone is connected to the remote control with Bluetooth® wireless technology.

Easy installation with the new casing structure

The casing is separated into the lower and the upper case. By inserting the upper case into the lower case embedded to the wall, the remote could be easily installed.

Easy to instinctively operate with simplified icons

Indoor unit benefits Summary

Benefits Series

When using RC-EX3D (Remote control), functions with symbol ● are available.

However, for RC-E5 (Remote control), functions with ★ are not available.

Energy Saving 	Inverter technology	Inverter control technology delivers high efficiency and a smooth operation from high speed to low speed. A smooth sine voltage wave is attained.	
	Energy-saving ★	Since the capacity is controlled automatically based on the outdoor temperature, energy can be saved without losing comfort.	
	Motion sensor ★	This sensor detects human activity and shifts the temperature setting according to the amount of activity in the room.	
	Home leave operation ★	This function ensures that when the room is unoccupied for long periods of time, the unit will maintain a moderate indoor temperature, avoiding extremely hot or cool temperatures.	
	Set temperature auto return ★	This function allows the user to program a preferred set temperature that the unit will return to each time it is operated.	
Comfort 	Automatic operation	This function automatically selects the required heating or cooling function based on the current room conditions.	
	Silent operation	This function allows the user to program periods where the unit will operate with reduced noise levels, perfect for night time and an uninterrupted sleep.	
	Hi power operation ★	Use the high power function to quickly reach your optimum temperature level when you first turn on the unit. This function will operate for a maximum of 15 minutes before returning to normal operation.	
Air flow 	Flap control system	This function allows the user to set the upper and lower limit positions of the flap at each air outlet individually, providing you with complete control over interior air flow.	
	Vertical auto swing	The vertical louvers on your unit will move up and down continuously during operation. This function allows you to set the up/down swing position of the louver to the preferred operation angle.	
	Draft prevention setting ★	Draft Prevention setting provides a comfortable air flow without any draft feeling. Whether cooling or heating a room, the remote control can be used to instantly suppress any warm or cool drafts. This accurately assists how air flow is directed out of the indoor unit.	
	Automatic fan speed	The unit's on-board microcomputer continuously monitors the room's air temperature and adjusts the air flow automatically.	
Timer 	Sleep timer	This function allows the user to set a pre-determined amount of time between 30 and 240 minutes that your unit will operate for before switching off.	
	Peak-cut timer ★	This function lets the user to preset the capacity limit during certain periods of the day, minimising energy consumption during peak billing times, thus reducing operation costs.	
	Weekly timer	Set the unit to turn on and off automatically on a weekly basis to suit your usual room usage on each day.	
Convenient 	Function Switch ★	From the eight available functions on the unit, this function allows the user to set two functions to operate automatically.	
	Favourite setting ★	Operation mode, set temperature, fan speed and air flow direction automatically adjust to the programmed favourite setting.	
	Static pressure adjustment	This is operable when connecting duct type indoor units equipped with the external static pressure adjustment function. It will adjust the airflow accordingly based on the connected duct static pressure.	
	Select the language ★	Set the language to be displayed on the remote control.	
	Air filter	The air filter in the unit traps and removes airborne dust particles and other allergens to provide you clean air.	
	Filter sign	This warning alerts when the filter needs to be cleaned.	
	Outside air intake	This function provides clean fresh air into the room through the external air intake, avoiding the constant recycling of internal air.	
Others	Self diagnostics	The internal microcomputer automatically runs a diagnostic of the system in the event of a malfunction. This enables authorised dealers to isolate and repair any issues.	
	Built in drain pump	The built-in drain pump, allows greater flexibility with installation, offering a great solution for applications with limited space.	
	Improved serviceability	The fan unit (comprised of impeller and motor) is easily accessible from either the side or bottom of the unit and can be slid out for easy maintenance.

Automatic anti-draft control

(option)

Thermal sensor kit

LC-T-5CW-E
LC-T-5CB-E

1. Automatic anti-draft control

Automatically activates the louvers when the room temperature is hotter or colder than the set temperature. After detecting the room temperature at the set temperature, the draft prevention panel is activated.

2. Direct flow control

The louvers are controlled to blow towards human position.

3. Draft less control

Draft prevention panel is activated based on human position

Draft Prevention Panel

(option)

This prevents cold/hot draft being blown directly on the user. It is possible to set Draft Prevention Panel for each air outlet.

User can position panels by using the remote controller (RC-EX3D, Wireless kit) only when Draft Prevention Panel is available.

Motion Sensor

(option)

Motion sensor is equipped in the corner of the panel and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-T-5BW-E(White)
LB-T-5BB-E(Black)

Individual flap control system

According to room conditions, four directions of air flow can be controlled individually by utilizing the flap control system. Individual flap control is available even after installation.

Flap can swing within an upper and lower flap range position that can be selected with a wired remote control.

* The wireless remote control is not applicable to the Individual flap control system.

Power consumption decreased by new technologies

1. Adopting new impeller and flow path.

New designed impeller

improves the aerodynamic performance of the unit.

New designed component has better aerodynamic performance and achieve lower noise.

2. $\Phi 5.0$ heat exchanger tubes is adopted to improve the performance.

Slimmer heat exchanger and a dense copper piping.

Wireless Control System Now available in our FDT series

Control your air-conditioner from anywhere, anytime. If you turn on the air-conditioner when you're on the go, you'll be comfortable when you get to the office. Even if you forget to turn it off, you can turn it off when you are out and about.

850mm Drain Pump

Drain can be discharged upwards up to 850mm from the ceiling surface, allowing a piping layout with a high degree of freedom. Thanks to the 185mm flexible hose, equipment supports easy workability.

European design & Flat panel

Unique Grille Design

A grille designed with a unique structure and a clean white panel that blends with the room.

Integrated ceiling system design 600x600

Easy installation - with a weight of only 14kg, a thin panel, and a main body size of only 248mm.

Draft Prevention Panel

This prevents cold/hot draft being blown directly on the user. It is possible to set Draft Prevention Panel for each air outlet.

User can position panels by using the remote controller
(RC-EX3D, Wireless kit) only when Draft Prevention Panel is available.

Individual flap control system

According to room temperature conditions, four directions of air flow can be controlled individually by following Flap control system. Individual flap control is available even after installation.

The flap can swing within the range of upper and lower flap position selected with wired remote control.

*The wireless remote control is not applicable to the Individual flap control system.

Motion Sensor

(option)

Motion sensor is equipped in the corner of the panel and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-TC-5W-E

Suitable for High ceilings

The Powerful blowout carries comfortable air flow to the floor even in high ceiling applications. It is ideal for high ceiling offices, stores, etc., with a wide, uniform air flow throughout the room.

850mm Drain Pump

Drain can be discharged upward by 850 mm from the ceiling surface close to the indoor unit. It allows a piping layout with a high degree of freedom depending on the installation location.

Taking OA (Outside Air) into inside

Fresh air can be taken in without optional parts. When the fresh air is insufficient, optional parts can be used.

Installation workability

Drainage flow test can be done easily by use of this drainage spout.

Condition of the bottom of a drain pan can be checked through this transparent access hole without removing drain pan.

Transparent access hole to drain pan

750mm Drain Pump

The drain discharge system allows for a piping layout with a high degree of freedom (dependent on installation location). Discharge from above 750mm from a ceiling surface to the indoor unit.

The height of all FDUM models only 280mm

Transparent inspection window

Dirt condition of the bottom of the drain pan can be checked through this transparent inspection window without removing drain pan. (Please refer to P80)

Improvement of the serviceability

Fan unit (impeller and motor) can be pulled out from the right side of the unit. Maintenance can be carried out from the right side or the bottom side of the unit.

Motion Sensor

(option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-KIT2

Round duct adapter

In case of requirements of round duct adapter, please refer to P85.

- The data are measured under the following conditions (ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
- The data of nominal cooling and heating capacity and sound pressure level are measured with 10Pa of external static pressure.
- The sound level indicates the value of rear-intake type with duct in anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
- Sound Pressure Level shows the value when the supply duct of 2m and the return duct of 1m (except the Bottom air return) are connected to the unit.

Sound pressure level *1: Mike position is 1.5m below the unit, *2: Mike position is 1m in front and 1m below of the air supply duct.

Compact and thin size, light weight

Our leading high technology has created the best solution for air-conditioning in hotels. The compact and thin sized units don't compromise on high energy efficiency all while weighing in at only 20kg. The lowest sound level in the industry can ensure comfortable stay and rest in hotels.

Motion Sensor

(option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-KIT2

Installation Flexibility

Control box and drain piping can be installed on both side of the unit and air intake to the unit is available from bottom or back side. Our highest technology can satisfy diverse installation requirements.

Wired remote control

Simple remote control

RCH-E3
(option)

Designed specially for hotel rooms, control buttons are limited only to the minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Elegant Timeless Design

The FDK series air-conditioners are innovatively designed with rounded contours that beautifully fit into any of Europe's diverse interior settings. Created by an Italian industrial design studio based in Milan, Tensa srl, the design meets a broad range of requirements. (FDK15-56)

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

*The wireless remote control is not applicable to the flap control system.

Lateral Swing ► flap swings from right to left automatically

**Up/Down Flap swing
+
Lateral swing**

Jet Technology

FDK models adopt the air flow design that's proven to minimise resistance in a CFD analysis to achieve uniform air-conditioning to the furthest corners of the room.

Fast ← → Slow
Colours in the figure show the air speed.

Motion Sensor

(option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

RCN-FW-E2

Sophisticated Design

With an elegant semi flat front panel in stylish white, the new series fit in various kinds of rooms and create relaxing atmosphere. Choice of wall hanging, floor standing or behind gallery installation is available.

Quiet Operation

Thanks to the optimum balance of air outlet direction and sufficient air flow volume, the sound level has been minimized. The level of FDFW28KXE6F in the cooling Lo mode is only 30dB(A).

Flap control system

Selection of flap position is possible.
A flap can be set at different angles.

*The wireless remote control is not applicable to the flap control system.

Convenient to use operation

Simultaneous lower and upper air outlets or upper outlet can be selected by air flow direction button. Further control can be arranged by a remote control.

(In case of use of wireless remote control)

Improved comfort with the airflow from a wide outlet

With the 60 degrees angle of the airflow from the front to the upper side the comfort has increased.

Piping could be taken from the side and the bottom leading to an improved serviceability and ease of installation

Wider air flow for optimum comfort

Available in two types

The unit could be chosen from non concealed type and concealed type depending on the installation conditions

Compact design at 630mm height

Motion Sensor

(option)

The optional motion sensor on our floor standing units saves energy by operations by detecting human movement. Our smart technology provides energy saving control by shifting set temperature by detecting human activity.

Built into the ceiling or wall plane, our motion sensor smart technology improves energy saving performance and overall room comfort.

LB-KIT2

Compact design

Compact design at just 280(650, 1100), 379(1800, 2400)mm in height, high static pressure of 200Pa and the industry's lowest noise level can meet various kind of installation locations for offices, refresh rooms, restrooms and kitchens of restaurants etc.

- (1) This unit is the specific unit for processing the outdoor air temperature closer to the room temperature. For conditioning the room temperature a dedicated air-conditioner is required additionally.
- (2) This unit monitors the outdoor air temperature and controls the thermostat's ON/OFF at the setting temperature by the remote controller, which indicates the outdoor air temperature for controlling the thermostat's ON/OFF. When the thermostat is turned OFF, the operation is changed to the fan mode so that unprocessed outdoor air will be blown into the room directly. Therefore place the air outlet port or orient the air outlet direction not to blow air directly to persons in the room, especially in small room such as a restroom and/or sanitary hot water supplying room.
- (3) It is strictly prohibited to monitor the room temperature by switching to the thermistor at the remote controller side and/or the optional remote thermistor. Otherwise dew formation at air outlet port and/or dripping may occur during cooling operation due to the lower outdoor air temperature. Therefore keep the remote controller of this unit in place closer to the administrator so as not to be touched freely by the end user.
- (4) Dehumidifying operation with this unit is prohibited.
- (5) When handing over this unit to the end user, make sure to explain sufficiently about the foregoing cautions, the installation place and usage of remote control for this unit and the location of the air outlet.

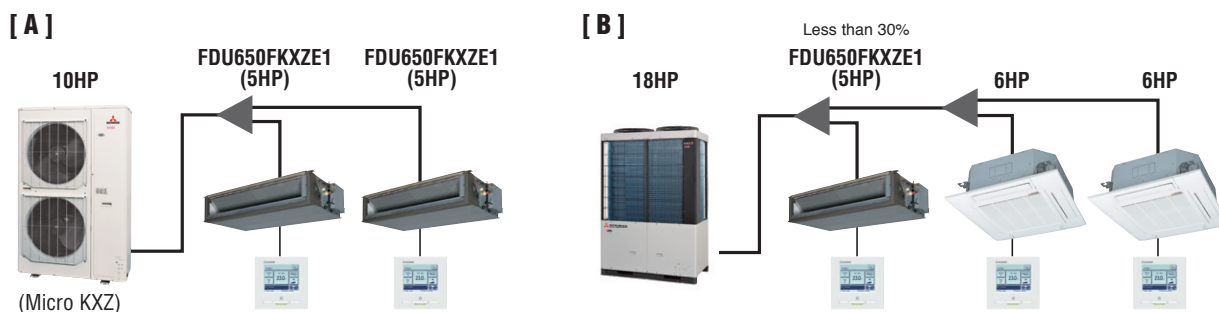

Connectivity with Outdoor units

FDU-F series are connectable to 8-60HP KXZ2 outdoor units, can not be connected to Micro model (4-6HP), KXZ Lite.

Combination with Outdoor units

	case	Combination
A	Only OA processing units are connected with outdoor units.	The total capacity of FDU-F is 50-100% of outdoor capacity and max quantity of FDU-F is 2 units.
B	Both of OA processing units and dedicated air-conditioner are connected with outdoor units.	The total capacity of FDU-F and dedicated air-conditioners is 50-100% of outdoor capacity and max quantity of FDU-F should be below 30% of outdoor unit capacity.

Concept (Difference between FDU-F and SAF)

SAF is the energy recovery ventilation unit which can recover heat energy from exhaust air to supply air and "has no air processing function, but FDU-F is an air processing unit which can treat the supply air closer to room temperature by cooling or heating in connection with KXZ refrigerant system and exhaust air is discharged to outside of the room.

FDU-F OA Processing units

1. The data are measured at 33°CDB 28°CWB (68%RH) during cooling and 0°CDB-2.9°CWB (50%RH) during heating (no frost).

2. Temperature range of outdoor air must be 20–40°CDB (32°CWB) during cooling and 0–24°CDB during heating.

3. Sound level indicates the value in an anechoic chamber. During operation these value are somewhat higher due to ambient conditions.

4. The factory E.S.P. setting is set within the range of 10 - 120Pa.If SW8-4 is turned to "ON", E.S.P. setting range can be changed to 10 - 200 Pa. (with RC-EX3D and RC-E5 only)

Hydro Module unit HMU

HMU140 · 280

Remote control (option)

Wired

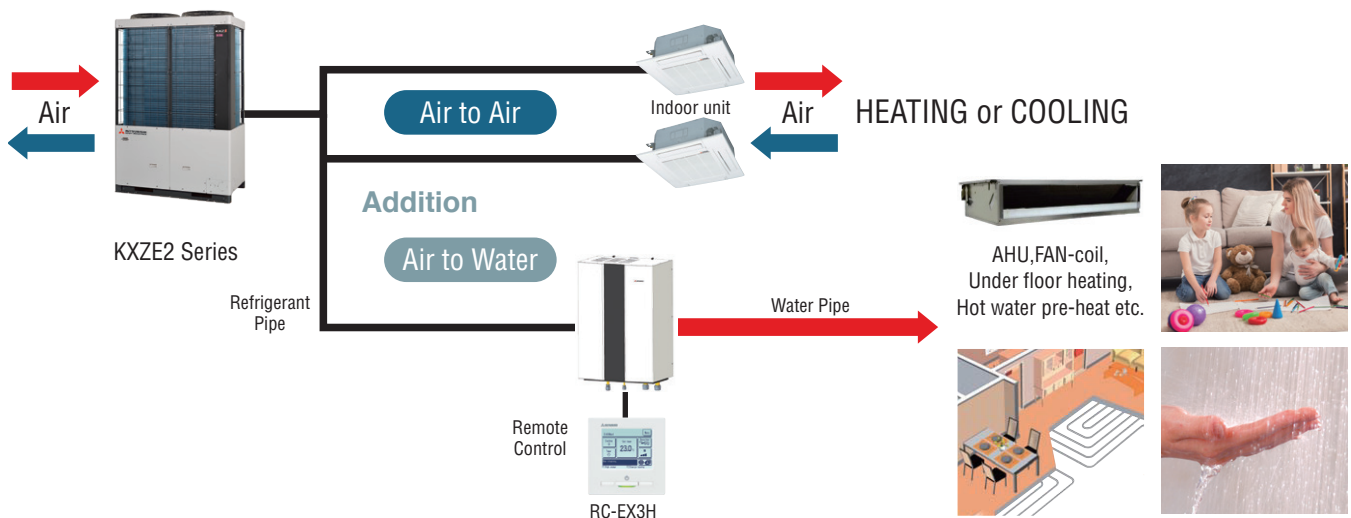

RC-EX3H

What is the hydro module unit? (Hydro module unit : HMU)

This unit is an auxiliary device for use with the VRF type multi systems to control water temperatures.

It employs the plate heat exchanger in place of fin heat exchanger, and produces cold or hot water by exchanging heat between refrigerant and water.

Since it can produce hot or cold water using the VRF type multi systems as the heat source, it allows to configure a chiller system in a simple way on the one hand. On the other, it can expand the range of applications of air-conditioner because it can be used mixed with the multiple indoor unit for building.

Target outlet water temperature constant control

- This is achieved by controlling compressor frequency and control of EEVs.
- Controlling the capacity of HMUs in accordance with the load.
- The HMU is designed to achieve a hot water temperature of 55°C.

Antifreeze control

- Anti-freeze protection of plate heat exchanger is enabled during defrost operation.

Mixed operation

- Mixed operation is possible in the air to air indoor unit and HMU.
- During the operation only of HMU, it can accommodate a wide range of outlet water temperature controlled by a dedicated control.
- When the system is in mixed operation, the HMU or air-conditioner can be set as priority.

External equipment linked

- External output of interlocking signal to an external heat source for the secondary heating.
- Possible target setting temperature change from the external input. (3 points)
- Water pump control (ON / OFF) possible.

*HMU is designed for closed loop heat exchange applications. Connections to any other open loop systems (such as domestic water) should be handled via a secondary heat exchanger.

Application example

Heating system using HMU and air-conditioner propose various solutions.

Ventilation

Fresh Air Ventilation and Heat Exchange unit

SAF-E7

Helping you to reduce energy consumption and carbon emissions by capturing waste energy. EFBD also allows for smaller sized units as less heating/cooling requirements are needed!

Switch box (option)

Energy Performance of Building Directive - EPBD

The EPBD function limits electrical/gas power to provide heating or cooling to commercial buildings. To use this function, the building designer needs to select energy efficient heating/cooling equipment and to minimise energy losses through ventilation systems.

SAF smart technology recovers heat energy in the atmosphere which would have otherwise been lost. It then uses this energy to warm air entering the building. The reverse happens in warmer climates where the exhausted cool air is used to partially cool the incoming air.

Remote control

The following functions are newly available.

- ON/OFF Timer – The hour and minute of timer on/off can be set.
- Filter Sign – Announces the due time for cleaning the air filter.

Increased external static pressure at UHi air flow

- SAF-DX is a heating or cooling coil incorporating KXZ series controls. It can be used in combination with our total heat exchanger. (SAF series)
- Combination of SAF-DX with other indoor units is possible. The capacity code index of each model is shown below and must be used when making the system selection. Total capacity code index must be within 100% of outdoor unit capacity code index.
- Remote control option is the same as other indoor units (see above). Connection to all Superlink controls is also possible.
- Optional condensate lift mechanism is also available (600mm height).
- Return air temp. control or supply air temp. control can be selected.

SAF-DX can provide heating or cooling to the fresh air supplied through a 3rd party air handling unit or total heat exchanger such as our SAF series.

Electronic Expansion Valve Kit

EEV-KIT

- EEV-KIT is the control kit for operating the locally provided AHU or FCU with direct expansion heat exchanger coils in connection with the KXZ system.
(AHU : Air Handling Unit, FCU : Fan Coil Unit)
- EEV-KIT is composed of one EEV-Control ASSY and one EEV-Set.

DX : Direct expansion coil

Features

EEV-Control Assy has 2 types.

Refrigeration system	EEV-Control Assy	
	EEVKIT6-E-M	EEVKIT6-E-C
Single		1 box-Many boxes
Multiple	1 box (for master)	Many boxes(for slave)

EEV-Set Select from following 3 types according to the coil capacity.

Type	EEV6-71-E	EEV6-160-E	EEV6-280-E
Capacity	22-71	90-160	224-280

System configuration

- Single refrigeration system EEVKIT6-E-C ... Possible with multiple refrigeration systems
- Multiple refrigeration system EEVKIT6-E-M (1) + EEVKIT6-E-C ... Possible with multiple refrigeration systems(Max32)
- EEVKIT6-E-C is common for both single and multiple refrigeration systems

Single refrigerant system

- Single refrigeration system is the one that can have multiple outdoor units on one refrigerant pipe work circuit.
- There are 2 types of EEV-KIT systems that can be built into the single refrigeration system.
- System A : one EEV-KIT.
- System B : multiple EEV-KIT's.

System A

- This system has only one set of EEV-KIT built into one indoor unit with only one heat exchanger. This system can be applied to an indoor unit whose capacity is up to 10HP.

System B

- System B is a system that has multiple EEV-KIT's built into one indoor unit with multiple heat exchangers on one refrigerant circuit.
- This system can be applied up to 60HP (for KXZ) AHU capacity.

Multiple refrigerant system

Multiple refrigeration system is an AHU system with multiple independent refrigerant circuits and one master control to control the whole system.

Advantages

- Large systems are possible [max capacity 896kW]
- External control
- Capacity step control
- Can connect to 32 units

Additional parts over a single refrigeration system

- One master control
- The slave EEV control and EEV set are the same as a single refrigeration system.

Connection to SUPERLINK-II

Intuitive touch controller with Liquid Crystal Display

User friendly

- LCD panel with light tap operation introduced as the industry's first
- Simple interface with only three buttons

Easy view

- Big LCD with 3.8 inch full dot display
- Back light function
- Multi language display (9 languages)

Operation mode

Operation mode setting screen

The desired operation mode can be selected by simply tapping this button.

Setting temperature screen

You can select the temperature as desired by tapping ▲▼ button.

Run / Stop

High power operation

- The highest capacity operation (Max 15 minutes)
- Increasing compressor speed
- Increasing air flow volume

Energy-saving operation

- Changes set temperature.
- At 28°C in cooling mode and 22°C in heating mode, 25°C in auto mode.
- Operation correction by outdoor temperature

Main functions

	Function name	Description
Economy & Timer	Energy-saving operation	Since the capacity is controlled automatically based on the outdoor temperature, energy can be saved without losing comfort.
	Sleep timer	Set the time period from start to stop of operation. The selectable range of setting time is from 30 to 240 minutes (at 10-minute intervals).
	Set temperature auto return	The temperature automatically returns to the previously set temperature.
	Set ON timer by hour	When the set time elapses, the air-conditioner starts.
	Set OFF timer by hour	When the set time elapses, the air-conditioner stops.
	Set ON timer by clock	The air-conditioner starts at the set time.
	Set OFF timer by clock	The air-conditioner stops at the set time.
	Weekly timer	On or Off timer can be set on a weekly basis.
	Peak-cut timer	Capacity control can be set by using peak cut function on RC-EX3D for better energy saving. Five-step capacity control is available.
	Home leave operation	When the unit is not used for a long period of time, the room temperature is maintained at a moderate level, avoiding extremely hot or cool temperatures.
Comfort	Big LCD & Touch screen panel	Large 3.8 inch screen has resulted in improved visibility and operability.
	Easy modification of Individual flap control	User can visually confirm and set the direction of flaps using the visual display on the remote controller.
	Automatic fan speed *1	The micro-computer automatically adjusts the airflow effectively to follow the changes of return air temperature.
	Temp increment setting	Temperature increment for the change of the set temp can be changed.
Convenience	Silent mode	Set the period of time to operate the Outdoor unit with prioritizing the quietness.
	Function switch	The function switch allows user to select and set two functions among available functions.
	Favourite setting	Operation mode, set temperature, fan speed and air flow direction automatically adjust to the programmed favourite setting.
	Adjusting Brightness of the background light	The brightness of the background light can be adjusted by 10 stages.
	LCD contrast setting	This function allows user to adjust LCD display contrast.
	High power operation	High Power Mode increases the unit operating ability for 15 minutes to quickly adjust the room temperature to a comfortable level.
	Back light setting	This convenient function allows user to see controls under low light conditions.
	Administrator settings	This function only allows specific individuals to operate the unit.
	Setting temp range	Limited range of setting temperature in the heating or the cooling operation can be selected.
	External Input/Output Function	The external input/output of indoor unit by remote controller can set input/output based on user needs.
Service	Select the language	Set the language to be displayed on the remote control.
	USB connection (mini-B)	This function allows batch input of schedule timer settings and other settings involving a large amount of data.
	Error code display	This function allows user to check information displayed when abnormal function of the unit occurs.
	Operation data display	Displays various types of air-conditioner operation data in real time.
	Contact company display	Address of the service contact is displayed.
	Filter sign	Announces the due time for cleaning of the air filter.
	Static pressure adjustment	Allows user to adjust duct static pressure using the remote control.
	Backup Control	Allows for rotation control, fault backup control, and capacity backup control.

*1 Cannot be used when a centralized control remote is connected.

Wireless remote control

(option)

For wireless control simply insert the infra-red receiver kit on a corner of the panel

RCN-T-5BW-E2 RCN-TC-5AW-E3 RCN-TW-E2 RCN-TS-E2
RCN-T-5BB-E2

RCN-K-E2, RCN-K71-E2 RCN-E-E3 RCN-FW-E2 RCN-KIT4-E2

*The wireless remote control is not applicable to the Individual flap control system.

Simple remote control

(option)

RC-ES1 (wired) **New!**

H86 x W86 x D17 mm

- Simple and sophisticated design
- Compact size (86mm×86mm)
- Remote control with Bluetooth® wireless technology

Wireless connection

Remote control with Bluetooth® wireless technology. Easy set-up of indoor units.

Notifications of abnormal conditions or operational data from the remote control will be sent to your smartphone.

*The Bluetooth® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by MITSUBISHI HEAVY INDUSTRIES THERMAL SYSTEMS, LTD. is under license.

Wired remote control

(option)

RC-E5 H120 x W120 x D19 mm

The RC-E5 controller enables extensive access to service and maintenance technical data combined with easy to use functions and a clear LCD display.

Weekly timer function as standard

RC-E5 provides (as a standard feature) a weekly timer, which allows one-week operation schedules to be registered. A user can specify up to four times a day to start/stop the air-conditioner. (Temperature setting is also possible with the timer).

Run hour meters to facilitate maintenance checking

RC-E5 stores operation data when an anomaly occurs and indicates the error on the LCD. It also displays cumulative operation hours of the air-conditioner and compressor since commissioning.

Room temperature controlled by the remote control sensor

The temperature sensor is housed in the top section of the remote control unit. This arrangement has improved the sensitivity of the remote control unit's sensor, which permits more finely controlled air-conditioning.

Changeable set temperature ranges

RC-E5 allows the upper and lower limits of a set temperature range to be specified separately. By adjusting a set temperature range, you can ensure energy saving air-conditioning by avoiding excessive cooling or heating.

Simple remote control

(option)

RCH-E3 (wired) H120 x W70 x D15 mm

Designed specially for hotel rooms, the controller's buttons are limited only to the minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Up to 16 units

It can control up to 16 indoor units, by pressing the AIR-CON No. button.

AUTO restart

This function allows starting the air-conditioner automatically when power supply is restored after power failure or by turning on the power switch.

*RCH-E3 is not applicable to the Individual flap control system. 8m
*When RCH-E3 is used, the fan speed setting can only be set to 3 speed settings (Hi-Me-Lo).

Thermistor

(option)

SC-THB-E3

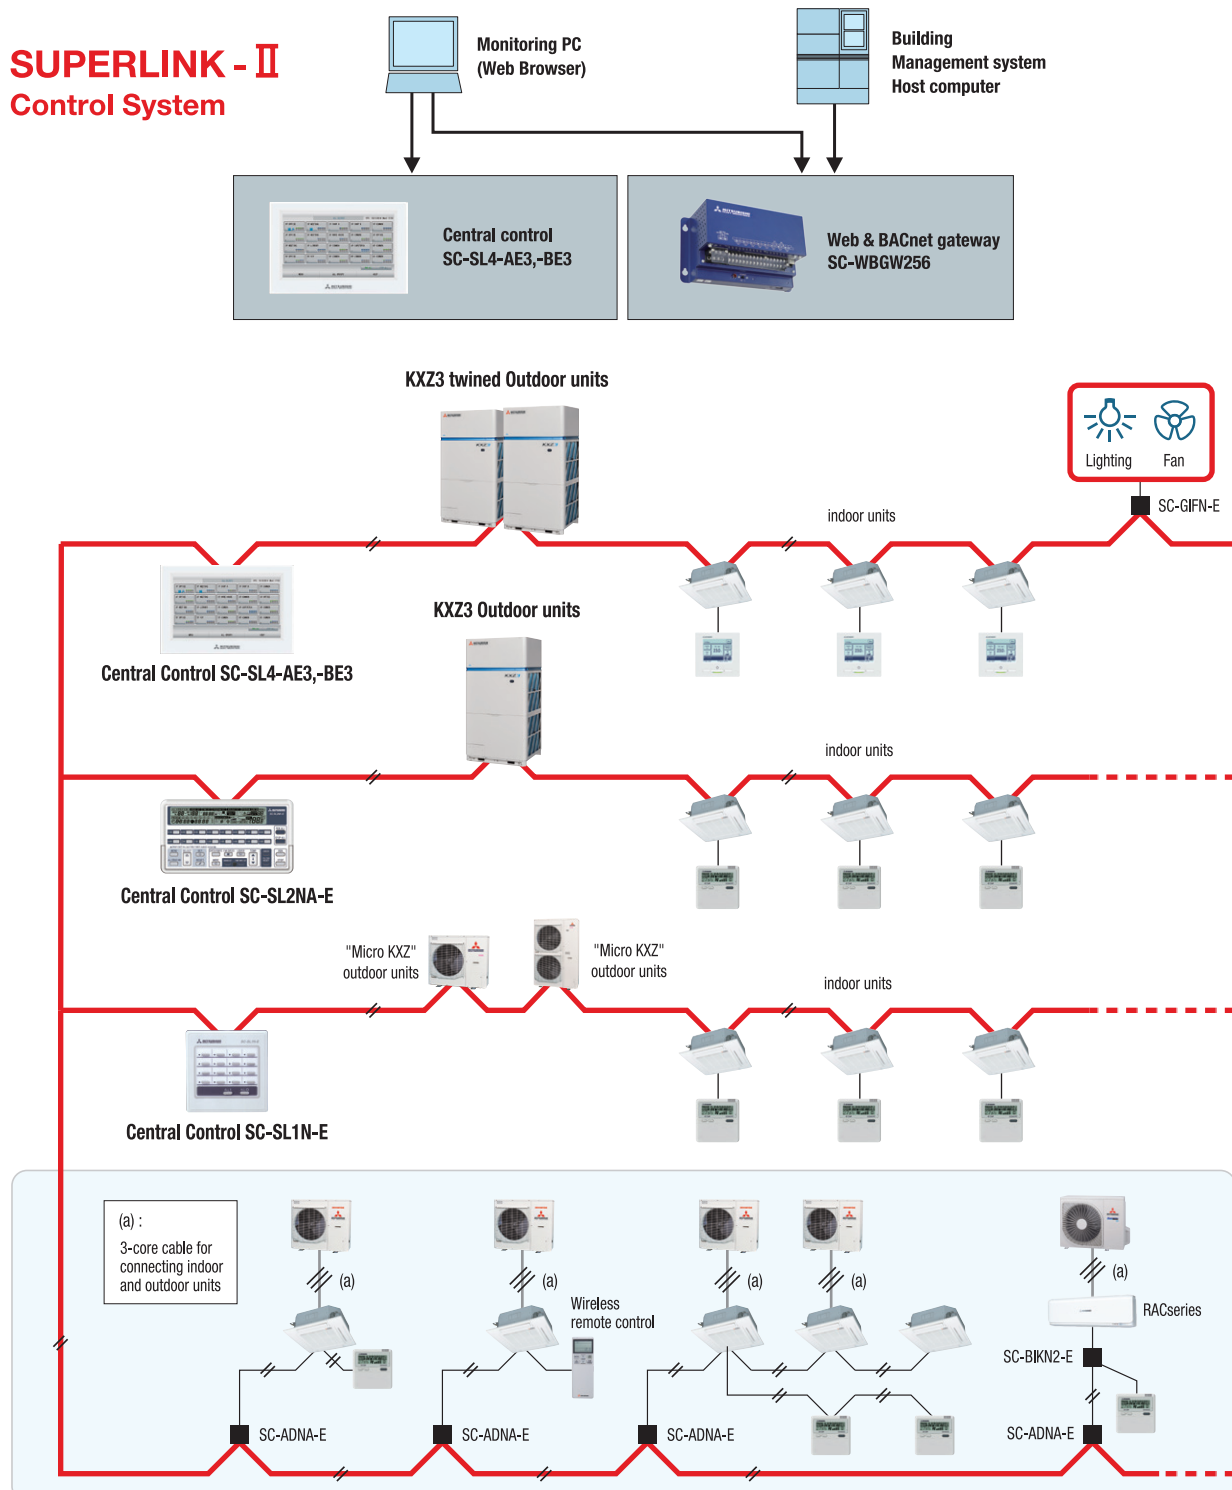

In case the sensor integrated in the indoor unit or in the remote controller is unable to sense the room temperature correctly, or an individual controller in each room is not required but a temperature sensor is (as when a central control system is in place), install SC-THB-E3 in an adequate location in the room.

Controls network overview

Our company offers simplicity in installation with the highly sophisticated **SUPERLINK-II Control System**

This offers building owners and occupiers a comprehensive control and management system while providing complete commissioning and service maintenance assistance for installers and service engineers. The SUPERLINK-II is an advanced high speed data transmission system which can connect up to 128 indoor units and 32 outdoor units onto one network. A wide range of control options are available for the SUPERLINK-II network to suit any application large or small, as well as connection to a new or existing Building Management System (BMS).

Central Control

SC-SL1N-E

**Start/stop control of up to 16 indoor units either individually or collectively.
Simple centralised control.**

1. The SC-SL1N-E is connected to the Superlink- II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, with the sixteen operation button.
3. The unit or group numbers in operation or in need of service are displayed with an LED.
4. Collective start/stop is also available through the simultaneous on/off button.
5. Up to 12 SC-SL1N-E units can be connected to a Superlink- II network (consisting of up to 128 indoor units).
6. If a power failure occurs, the SC-SL1N-E will resume the operation of the system according to a stored operation condition, once power is restored.

SC-SL2NA-E

Central control of up to 64 indoor units including weekly timer function as standard.

1. The SC-SL2NA-E is connected to the Superlink- II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, or 16 groups of units, with the sixteen operation buttons.
3. It also monitors and controls the following functions for individual units, groups of units or the complete network: operation mode, set point temperature, return air temperature, louvre position, error code. Air flow and center lock function.
4. The unit or group numbers in operation or in need of service are displayed with an LCD.
5. Collective start/stop is also available through the simultaneous on/off button.
6. If a power failure occurs, the SC-SL2NA-E will resume the operation of the system according to a stored operation condition, once power is restored.
7. The SC-SL2NA-E can be connected to an external timer to facilitate timed on/off cycles.

Example of control by a central control SC-SL2NA-E

An SC-SL2NA-E performs the start/stop control, monitoring and mode setting of up to 64 units. It is a high quality air-conditioner control system that allows up to 64 indoor units to be freely grouped into 1 to 16 groups.

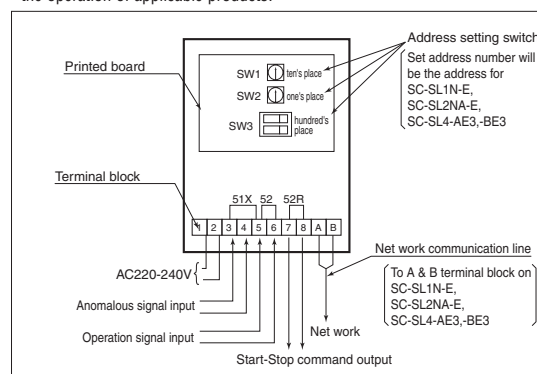

It allows not only the start/stop control but also the monitoring, display of operation statuses such as in operation or in need of service and mode setting such as switching of operation modes of connected units collectively, by group or individually.

• Outer dimensions: H120 x W215 x D25+35*mm.

35* is the measurement including the part contained in a recess.

SC-GIFN-E Interface kit

- Applicable products
Ventilation fan, Air purifier
- By using SC-GIFN-E together with central control such as SC-SL1N-E, SC-SL2NA-E and SC-SL4-AE3, BE3, you can start-stop, operate & monitor the operation of applicable products.

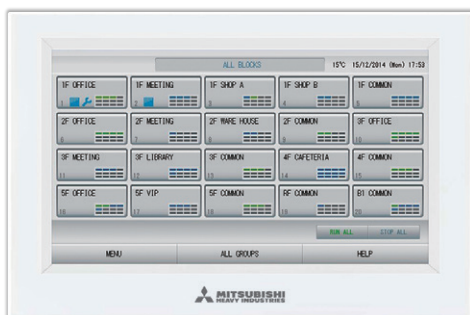

Note:Please consult dealer for combination of center controls and Building Management Systems interface units.

SC-SL4-AE3,-BE3

Mitsubishi Heavy Industries Thermal Systems introduces the full colour touch screen central control SC-SL4-AE3,-BE3, with 9 inch interactive LCD display. Offers control, monitoring, scheduling and service/maintenance functions for up to 128 indoor units.

Control with PC is available by use of Microsoft Edge/Google chrome.

Indoor units can be controlled, scheduled, monitored and either individually, as groups or as blocks of groups with the following functions:

Control	Monitoring	Scheduling	Administration/Service
Run/Stop / Home leave	Operating state	Yearly schedule	Block definition, Floor layout
Mode (cool/heat/fan/dry/Auto)	Mode	Today's schedule	Group definition
Set temperature	Set temperature	Detailed daily schedule	Unit definition
Operation permitted/prohibited	Room temperature	Season setting	Time and date setting
Fan speeds	Operation permitted/prohibited		Alarm history
Air direction	Fan speed		Energy consumption calculation period
Filter sign reset	Air direction		Energy consumption, cumulative operation time
Demand control (3 steps)	Filter sign		Flap control setting
Emergency stop	Maintenance (1, 2 or back-up) Outdoor air temperature		Operation data monitoring Data logging (Run / Stop set temperature , room temperature , outdoor air temperature)

Schedule setting

For each group

Schedule settings for each group are possible. The RUN/STOP/HOME LEAVE time, operation mode, remote control Lock/Unlock setting, temperature setting, energy setting, and silent mode can be set up to 16 times per day.

Yearly Schedule

Schedule settings for a year are also possible. The weekday, holiday, special day 1 or special day 2 can be selected and set. Able to automatically update the yearly schedule.

Alarm history

A maximum of 300 records is displayed for the history of error occurrence and restoration in the unit of air-conditioner. It is possible to output the history data to a CSV data file.

Maintenance code

Able to show the maintenance code

Improved visibility

Compared to the old model the visible angle of the LCD has expanded and the visibility has improved.

High visibility

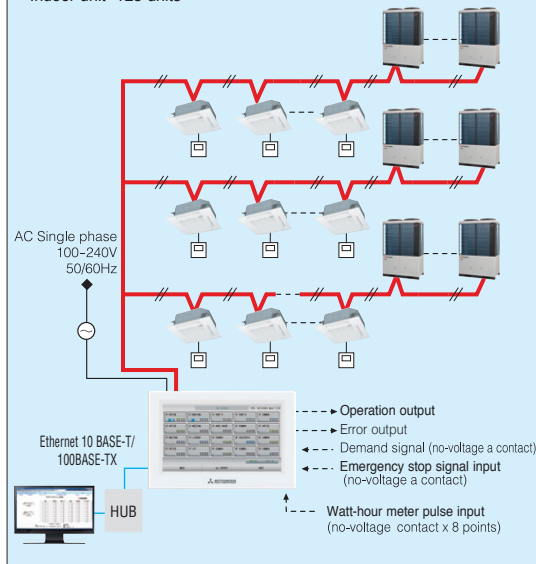

Increase in size from 7 to 9 inches

Contrast between five colours for icon display and black light base screen has achieved high visibility.

System diagram

Indoor unit 128 units

PC requirements: Windows 10, Windows 11
Monitor resolution 1280 x 1024 or higher.
Web browser requirements: Microsoft Edge , Google Chrome

Operation time history

Possible to check operation time history for cooling and heating separately.

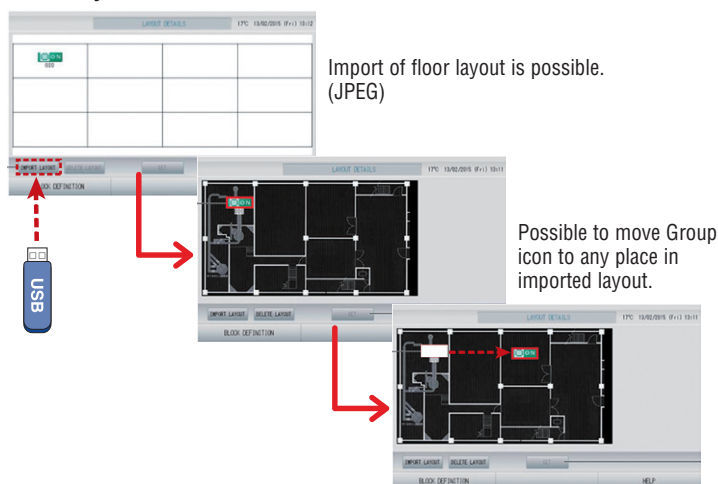

Models that can be connected has increased

Can now connect to Q-ton/ HMU. Can have easy centralized control over various modes

*When connecting to Q-ton, an interface(RCI-MDQE2) is necessary.

Block layout function

Web function

You can monitor and control up to 128 indoor units (Max.128 groups) from a PC or tablet PC.

<Example>

Monitoring and operating air-conditioners in a lecture room of a university

New demand control function

With the new demand control, temperature shifts between 1-9°C (Cooling or Drying ;1-9°C, Heating: -1--9°C), fan mode can be selected.

Electric power calculation function:

(for SC-SL4-BE3 only)

SC-SL4-BE3 gives electric power consumption data (kWh) for each indoor unit, each group, each SUPERLINK-II system, and each watt-hour meter input.

	SC-SL4-BE3
Export data by	USB / LAN
Calculation software	Included
Watt-hour meter pulse input (Maximum)	8
Max connectable indoor units	128

Item	Model	SC-SL4-AE3/SC-SL4-BE3
Ambient temperature during use		0 - 40°C
Power supply		1 Phase 100-240V 50/60Hz
Power consumption		9W
External dimensions (Height x Width x Depth)		172mm x 260mm x 23 (+70) mm
Net weight		2.0kg
Number of connectable units (indoor units)		up to 128 units
LCD touch panel		Colour LCD, 9 inches wide
Inputs	SL (Superlink) signal inputs	1 system (Superlink-II)
	Watt-hour meter pulse input*	8-point, pulse width 80ms or more
	Emergency stop signal input*	1 point, non-voltage a contact input continuous input (closed, forced stop)
	Demand signal input*	2 point, non-voltage a contact input continuous input (closed, demand control)
Outputs	Operation output	1 point, maximum rated current 40mA, DC24 V All units stop; Open, any unit operating; Close
	Error output	1 point maximum rated current 40mA, DC24 V Normal; closed. If even one unit is abnormal; Open (Open/closed can be changed)

* The receiving side power supply is DC 12V (10mA).

The air-conditioning charges calculations of this unit are not based on OIML, the international standard.

IoT Remote monitoring system

The Cloud system M-access can remotely control the air-conditioning units by using IoT technology.
With 3 different functions the system supports the operation and management from both the software and hardware.

RM-CGW-E1
H140 × W260 × D93mm

1 Diverse connectivity

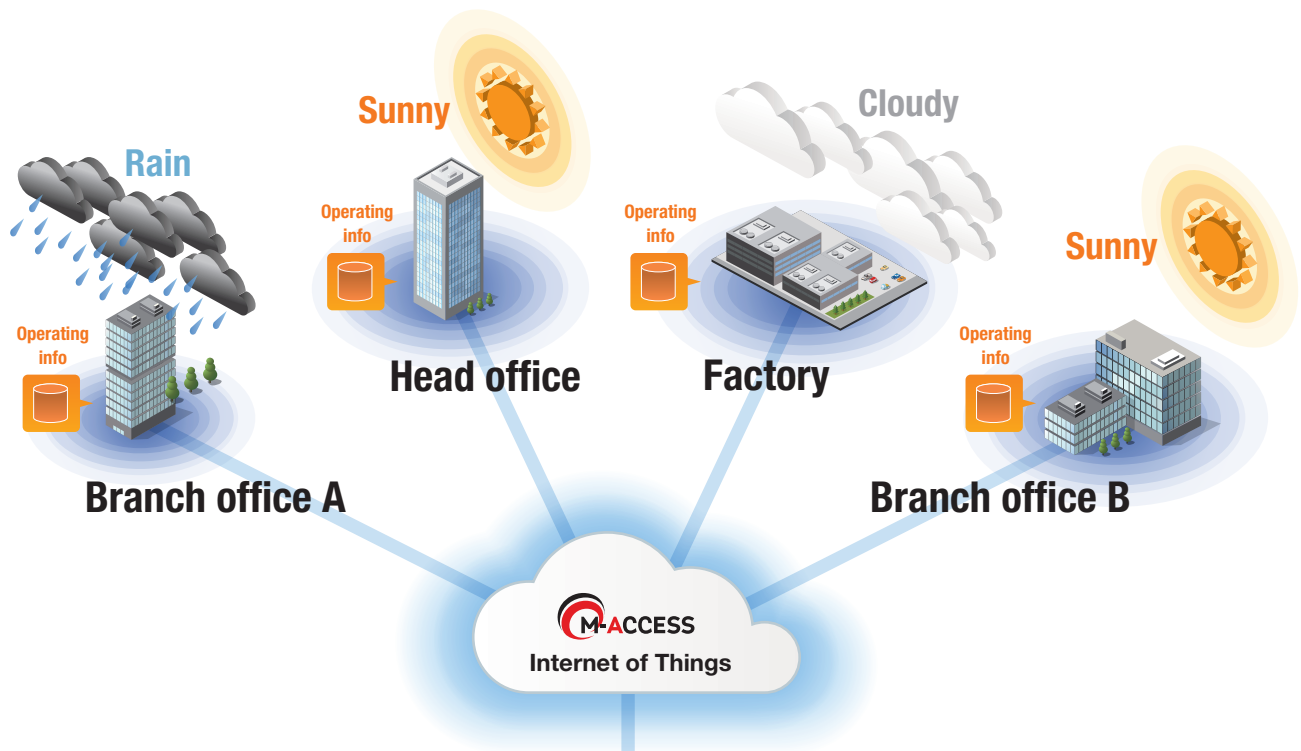

The system could be connected to a wide range of units.

2 Could monitor and control the units in various locations

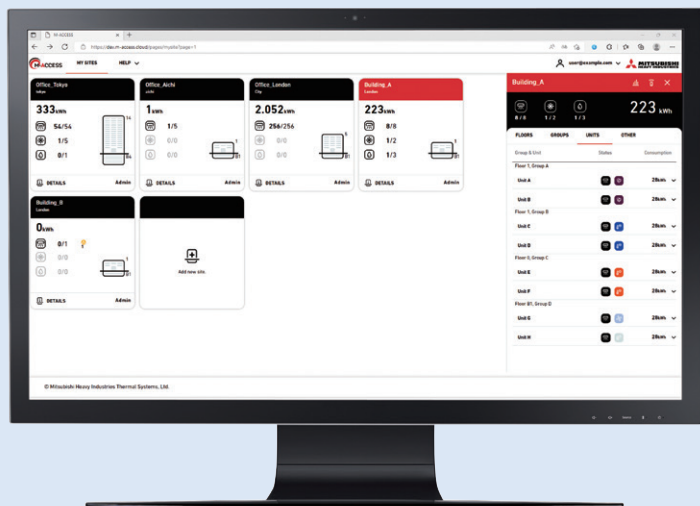

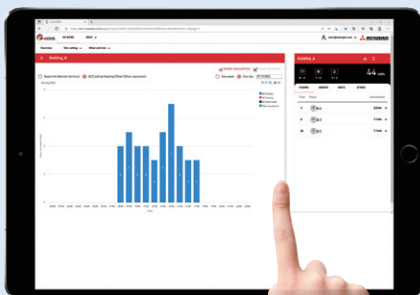

Could monitor the conditions of the air-conditioning units in remote locations in real time.

3 Error notifications

When detecting malfunction an alert is sent to the user by E-mail. Could register multiple users for the sending address.

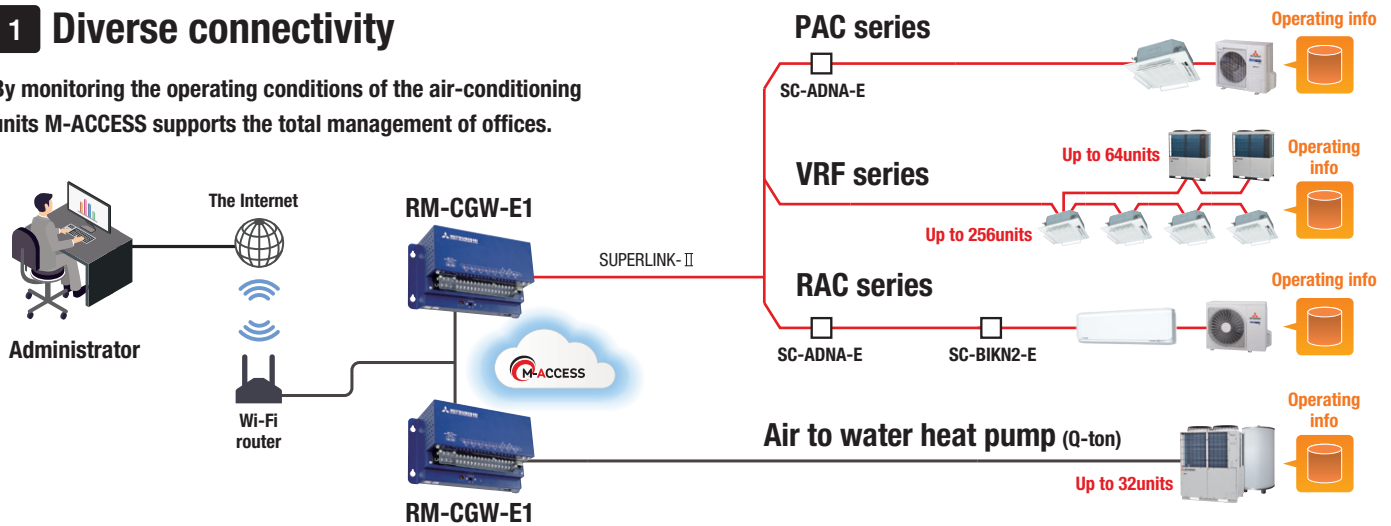

From PC and tablets

The photos of the devices are an image

1 Diverse connectivity

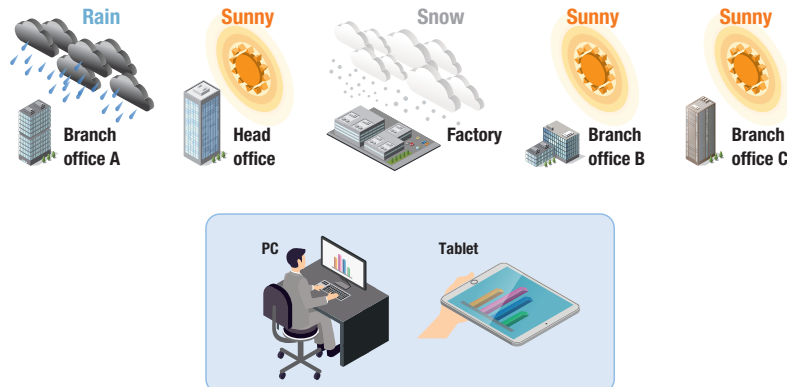

By monitoring the operating conditions of the air-conditioning units M-ACCESS supports the total management of offices.

2 Could monitor and control the units in various locations

Could know the real time operating conditions of the units in different locations.
Could simultaneously manage up to 128 different locations.

Example controlling 5 different locations with one device

1 Improving the operation and making the life cycle of units better

Could remotely activate/deactivate or change the setting temperature by looking at the weather conditions of various locations.

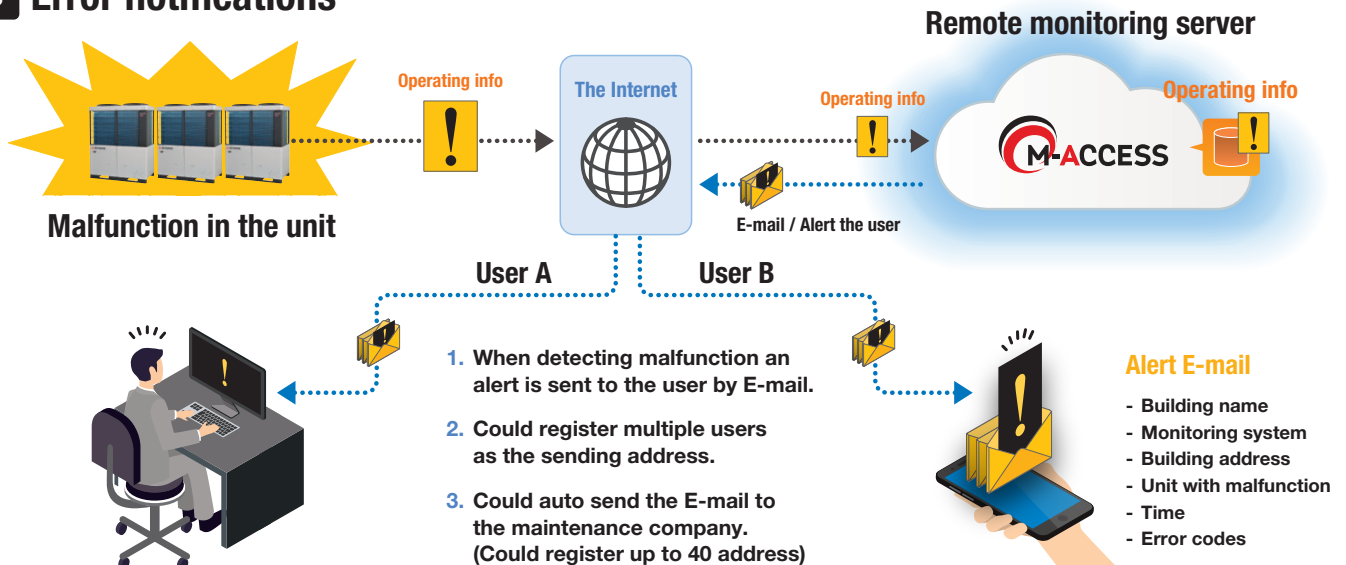

2 Making Efficient operation possible with connection to the various units

Operating the units with optimized combination

Could connect to VRFs, Packaged inverter units and Residential AC.

3 Error notifications

Building Management Systems

Our company offers a wide range of control options for the KXZ system to suit any application, large or small, as well as connection to a new or existing BMS.

SC-WBGW256 (Web & BACnet gateway)

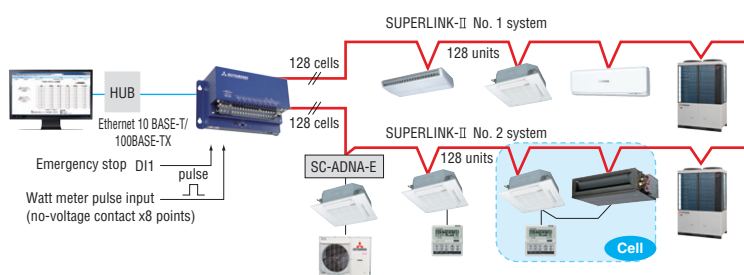

SC-WBGW256 controls and monitors of up to 256 cells (some cells can have two or more indoor units and total number of indoor units can be up to 256 units) centralised to a network PC using the Superlink- II web gateway. Simple installation is assured with no special software requirements, operation is via Internet Explorer. A low power embedded CPU and compact flash ROM ensure a large storage capacity with high reliability (no moving parts such as a PC fan, etc). An IP address filter function combined with three-level user authentication check also ensures security.

Also, SC-WBGW256 can be used as interface devices that convert Mitsubishi Heavy Industries Superlink- II communication data to BACnet code and are controlled centrally from a building management system.

Production by order

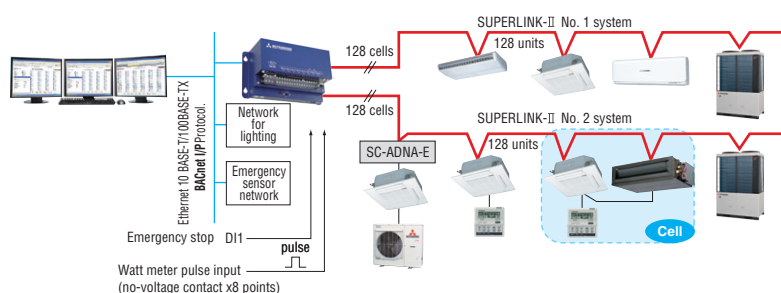

[In case of web gateway]

PC requirements: Windows7, Windows8.1, Windows10, Windows11.
Monitor resolution 1366 x 768 or higher.

[In case of BACnet gateway]

Users can manage up to 1024 units by connecting the four devices!!

Up to 4 WBGW256 can be handled by 1 Internet Explorer Screen (max. 256x4=1024 units)

INTESIS BMS Interface for Mitsubishi Heavy Industries Thermal Systems Air-Conditioners

All technical support, including specifying work, compatibility issues, product quality (repair and replacement issues), product liability issues and the required after sales service (including spare parts supply) will be provided by Intesis as it is an Intesis product.

Product sales and delivery will be conducted by Intesis as well.

For details concerning such matters please directly contact Intesis.

Integration of Mitsubishi Heavy Industries Thermal Systems VRF in your KNX installation by Superlink

Direct Connection to VRF outdoor units

The gateway is directly connected to the outdoor unit's communication bus and enables the control of all the indoor units connected to the system. This allows not only the control and monitoring of the main AC functions but the access to some internal variables of the outdoor units.

- Scan: Automatic identification of the units presents on the VRF system.
- Energy consumption signals from each indoor unit are available.
- Outdoor unit's signals available for the integration.
- Supports both BACnet/IP and BACnet MS/TP physical layers.
- Configuration through IP or USB (Console) port.
- Easy integration with Intesis MAPS.
- Automatic updates for both Intesis MAPS and interface's firmware.

AC Cloud Control

PAC Model: INWMPMH1001R000

Please access the followings for details.

Support tool

BIM (Building Information Modelling)

We can provide high quality Building Information Modelling (BIM) models in three formats:

1. Revit
2. 3D Cad
3. IFC

(IFC provides an interoperability solution between different software applications. The format establishes international standards to import and export building objects and their properties)

How and why BIM is used

BIM enables all disciplines of a project (Architects, engineers, quantity surveyors, contractors, clients etc..) to share a common model and data representing the project they are building.

- Better design visualization
- BIM reduces conflicts and changes during construction
- Increases overall accuracy of project documentation
- Improves cost estimating
- Improves energy analysis
- Simplifies reporting and scheduling

mhiae.com/BIM

e-seasonal

Coming soon

e-seasonal is an application for our Air-cooled VRF Outdoor unit selection.

By selecting a combination of systems, location and occupancy profiles you can simulate:

1. Annual seasonal efficiency calculation
2. Annual energy consumption, cost and CO₂ emission estimation
3. Comparison with multiple solutions including conventional heaters

It is possible to download to your PC for an offline version or using a web browser for an online version. e-seasonal provides solution suggestions according to your requested design conditions.

e-solution

Use our e-solution design software tool to find the latest specifications for our KXZ VRF systems. This software helps to simplify the processes to enable engineers to select the most suitable indoor units, outdoor units, pipework, controls & calculate any additional required refrigerants.

If you're an engineer interested in using e-solution, please register and download the e-solution via <https://mhiae.com/e-solution/> and be sure to download the latest updates when available.

Please be aware that this tool was developed to cater for the design of two and three pipe systems, and specifies the appropriate models and sizes. It also generates wiring diagrams and engineering drawing to export to AutoCAD or PDF. This flexibility allows engineers to print selected design information and technical data to present to potential clients. As well as personalising the design information into their own formats and documents for future proposals.

MHI e-service App

MHI e-service application is available & free to download to both IOS and Android devices.

The application covers "Mitsubishi Heavy Industries Thermal Systems, Ltd" Air-conditioning systems: Split (RAC & PAC), VRF, Q-ton & AtoW.

This "MHI e-service" Application enables field engineers to make:
A quick search of the meaning of error codes that may appear when there is a malfunction in a "Mitsubishi Heavy Industries Thermal Systems, Ltd" Air-conditioning system, and the probable cause for the malfunction.
Scan the unit's QR code and search the meaning of error codes depending on the model type
Additional refrigerant charge calculation for Split (PAC, RAC) & VRF
Currently available in English & Spanish languages and Italian

To download the App go to:

G	Connecting position of the local pipe. (gas side)	ø19.05 (3/4")(Brazing)	ø22.22 (7/8")(Brazing)	ø25.4 (1")(Brazing)

Notes:

- (1) It must not be surrounded by walls on the four sides.
- (2) The unit must be fixed with anchor bolts. An anchor bolt must not protrude more than 15mm.
- (3) Where the unit is subject to strong winds, the blower outlet should face perpendicularly to the dominant wind direction.
- (4) Leave a 1m or more space above the unit.
- (5) A wall in front of the blower outlet must not exceed the units height.
- (6) The model name label is attached on the lower right corner of the front.
- (7) Connect the Service valve with local pipe by using the pipe of the attachment.(Gas side only)
- (8) Mark ※ shows the connecting position of the local pipe.(Gas side only)

Minimum installation space

	I	II	III
L1	Open	Open	1500(500)* ¹
L2	300	5	Open
L3	300	300	300
L4	250(5)* ²	250(5)* ²	250(5)* ²

Notes:

- *1 Figure in () shows the value applicable when the flex flow adaptor is installed.
- *2 Under the setting condition as specified in (), it is necessary to secure 250 mm for the dimension L4 when replacing the compressor. Establish this for example by moving the unit during the work.

KXZ Lite Heat pump systems

FDC224KXZPE1, FDC280KXZPE1

Mark	Content	
A	Service valve connection of the attached connecting pipe (gas side)	ø19.05 (3/4") (Flare)
B	Service valve connection (liquid side)	ø9.52 (3/8") (Flare)
C	Cable draw-out hole (front · side)	ø30 x 2places
D	Cable draw-out hole (front · side)	ø45 x 2places
E	Cable draw-out hole (back)	ø50
F	Pipe/cable draw-out hole	4places
G	Drain discharge hole	ø20 x 3places
H	Anchor bolt hole	M10 x 4places

Notes:

- (1) It must not be surrounded by walls on the four sides.
- (2) The unit must be fixed with anchor bolts.
An anchor bolt must not protrude more than 15mm.
- (3) Where the unit is subject to strong winds, lay it in such a direction that the blower outlet faces perpendicularly to the dominant wind direction.
- (4) Leave 1m or more space above the unit.
- (5) A wall in front of the blower outlet must not exceed the units height.
- (6) The model name label is attached on the lower right corner of the front panel.
- (7) Connect the Service valve with local pipe by using the pipe of the attachment.
(Gas side only) (Accessory pipe is used only by FDC280KXZPE1)
- (8) Regarding attaching the pipe of accessories, refer to an attached installation manual.

	I	II	III
L1	Open	Open	500
L2	300	5	Open
L3	150	300	150
L4	250 (5)*1	250 (5)*1	250 (5)*1

Notes:

- *1 At the time of the installation at () dimension, Secure space of 250mm in lateral (L4) by unit movement at the time of the exchange work of the compressor.

All measurements in mm.

Label,model name

Before starting use

Heating performance

The heating performance values (kW) described in the catalogue are the values obtained by operating at an outdoor temperature of 7°C and indoor temperature of 20°C as set forth in the ISO Standards. Heating performance is reduced as the temperature drops. If the outdoor temperature is too low and the heating performance is insufficient, use other heating appliances as well.

Indication of sound values

The sound values are the values (A scale) measured in a chamber such as an anechoic chamber following the ISO Standards. In the actual installation state, the value is normally larger than the values given in the catalogue due to the effect of surrounding noise and echo. Take this into consideration when installing.

Use in oil atmosphere

Avoid installing this unit in an atmosphere where oil scatters or builds up, such as in a kitchen or machine factory.

If the oil adheres to the heat exchanger, the heat exchanging performance will drop, mist may be generated, and the synthetic resin parts may deform and break.

Use in acidic or alkaline atmosphere

If this unit is used in acidic atmosphere such as hot spring areas having high level of sulfuric gases or in alkaline atmosphere including ammonia or calcium chloride, places where the exhaust of the heat exchanger is sucked in, or at coastal areas where the unit is subject to salt breezes, the outer plate or heat exchanger, etc., will corrode. Please ask a dealer or specialist when you use an air-conditioner in places differing from a general atmosphere.

Use in places with high ceilings

If the ceiling is high, install a circulator to improve the heat and air flow distribution when heating.

Refrigerant leakage

The refrigerant (R32, R410A) used for air-conditioner is non-toxic and in its original state.

However, in consideration of a state where the refrigerant leaks into the room, measures against refrigerant leaks must be taken in small rooms where the tolerable level could be exceeded. Take measures by installing ventilation devices, etc.

Use in snowy areas

Take the following measures when installing the outdoor unit in snowy areas.

·Snow prevention

Install a snow-prevention hood so that the snow does not obstruct the air intake port or enter and freeze in the outdoor unit.

·Snow piling

In areas with heavy snow fall, the piled snow could block the air intake port. In this case, a frame that is 50cm or higher than the estimated snow fall must be installed underneath the outdoor unit.

Automatic defrosting device

If the temperature is low, and the humidity is high, frost will stick to the heat exchanger of the outdoor unit. If continued to use, the heating performance will drop.

The "Automatic defrosting device" will function to remove this frost.

After heating for approx. three to ten minutes, it will stop, and the frost will be removed. After defrosting, hot air will be blown again.

Servicing

After the air-conditioner has been used for several seasons, dirt will build up in the air-conditioner causing the performance to drop. In addition to regular servicing, a maintenance contract by a specialist is recommended.

Safety Precautions

Air-conditioner usage target

The air-conditioner described in this catalogue is a dedicated cooling/ heating device for human use.

Do not use it for special applications such as the storage of food items, animals or plants, precision devices or valuable art, etc.

This could cause the quality of the items to drop, etc.

Do not use this for cooling vehicles or ships. Water leakage or current leaks could occur.

Before use

Always read the "User's Manual" thoroughly before starting use.

Installation

Always commission the installation to a dealer or specialist. Improper installation will lead to water leakage, electric shocks and fires.

Make sure that the outdoor unit is stable in installation. Fix the unit to stable base.

Usage place

Do not install in places where combustible gas could leak or where there are sparks. Installation in a place where combustible gas could be generated, flow or accumulate, or places containing carbon fibers could lead to fires.
